

Mathematics G7

Table of Competencies

Unit	Sub-Unit	Competency	No.
1. Rational numbers	1.1 The concept of rational numbers	Express rational numbers as fractions	1
		Represent rational numbers as a set of fractions on a number line	2
		Describe the relationship among the sets W, Z and Q	3
		Determine the absolute value of a rational number	4
		Solve simple equations containing absolute value	5
	1.2 Comparing and ordering rational numbers	Compare rational number	6
		Order rational numbers by representing them on number line	7
	1.3 Operation on rational numbers	Add rational numbers	8
		Apply the commutative and the associative properties of addition	9
		Subtract one rational numbers from another	10
		Find the product of two rational numbers	11
		Apply the rules of multiplication of rational numbers	12
		Use the commutative, and associative properties of multiplication and distributive property of multiplication over addition of rational numbers	13
		Divide one rational number by another non-zero rational number	14
		Apply the rules for division of two rational numbers	15
2. Linear equations and inequalities	2.1 Solving linear equations	Solve linear equation by using rules of equivalent transformation (with positive coefficient of the variable)	16
	2.2 Solving linear inequalities	Solving linear inequalities with positive coefficients using the rule of equivalent transformation	17
3. Ratio, proportion and percentage	3.1 Ratio and proportion	Explain the notion of ratio	18
		Solve simple problems on ratio	19
		Solve problems on proportion	20
	3.2 Further on percentage	Compute the percentage of a given quantity	21
		Solve problems related to percentage	22
	3.3 Application of percentage in calculations	Apply the concepts of percentage to solve problems on profit and loss	23
		Apply the concept of percentage to solve problems on simple interest	24
4. Data handling	4.1 Collecting data using Tally Mark	Collect simple data from their environment using tally mark	25

Unit	Sub-Unit	Competency	No.
	4.2 Construction and interpretation of line graphs and pie charts	Construct line graphs using the given data	26
		Construct line graphs by collecting data from their environment	27
		Interpret simple line graphs	28
		Construct pie charts using the given data	29
		Construct pie charts by collecting data from their environment	30
		Interpret simple pie charts	31
	4.3 The mean, mode, median and range of data	Describe the terms mean, mode, median and range of data	32
		Calculate the mean of data	33
		Calculate the mode of data	34
		Calculate the median of data	35
		Calculate the range of data	36
5. Geometric figures and measurement	5.1 Quadrilaterals, polygons and circles	Explain the concept of a quadrilateral	37
		Identify the parts of a quadrilateral	38
		Explain the parts of a trapezium	39
		Construct a trapezium with given dimensions	40
		Describe the properties of trapezium	41
		Explain the concept parallelogram	42
		Construct a parallelogram with given dimensions	43
		Describe the properties of parallelogram	44
		Construct rectangles, squares and rhombuses	45
		Describe the properties of a rectangle	46
		Describe the properties of a square	47
		Describe the properties of a rhombus	48
		Identify the relationship between a parallelogram a rhombus, a rectangle	49
		Define a polygon	50
		Identify the difference between convex and concave polygons	51
		Name polygons having up to ten sides based on their number of sides	52
		Define a circle	53
		Identify the center, radius, diameter, chord and arc of a circle	54
		Explain the relations between radius, diameter and chords of a circle	55
	5.2 Theorems of triangles	State the angle sum theorem of a triangle	56
		Prove the sum of the measures of interior angles of a triangle is 180°	57

Unit	Sub-Unit	Competency	No.
		Apply the angle sum theorem of a triangle in solving related problems	58
		Explain the relation between the exterior angle and the two remote interior angles of a triangle	59
		Prove the exterior angle of a triangle equals the sum of the two remote interior angles	60
		Apply the exterior angle theorem of triangle in solving related problems	61
		Derive a formula for the sum of the interior angles of n-sides convex polygon	62
		Apply the formula for the sum of the interior angles of n-sided convex polygon to solve related problems	63
	5.3 Measurement	Derive the area formula for a triangle	64
		State and apply the formula for computing the area of a triangle	65
		Solve real life problem using the formula	66
		Compute the perimeter of a trapezium	67
		Derive the area formula for trapezium	68
		Determine the area of trapezium	69
		Calculate the perimeter of parallelogram	70
		Derive the area formula for parallelogram	71
		Calculate the area of a parallelogram	72
		To determine the quotient of circumference divided by a diameter of a circle	73
		Explain the number π as a factor of proportionality	74
		Compute the circumference of a circle	75
		Determine the area formula of a circle	76
		State the surface area formula of prism	77
		Calculate the surface area of prism using the formula	78
		Produce a model of right prism	79
		State the surface area formula of cylinder	80
		Calculate the surface area of cylinder using the formula	81
		Produce a model of cylinder	82
		(Blank)	83
		(Blank)	84
		State the volume formula of prisms	85
		Calculate the volume of prisms	86
		State the volume formula of cylinder	87

Unit	Sub-Unit	Competency	No.
		Calculate the volume of cylinder	88
