Benzene is an example of which type of hydrocarbon?

Answer: Aromatic hydrocarbon

The hydrocarbons are broadly classified into___?

Answer: Aliphatic, alicyclic and aromatic

When a compound has a carbon-nitrogen single bond it is called?

Answer: Amine

When a compound has carbon-nitrogen double bond it is called?

Answer: Imine

When a compound has carbon-nitrogen triple bond it is called?

Answer: Nitrile

Depending on the number of alkyl group attached to the nitrogen atom, the amines are classified as?

Answer: Primary, secondary and tertiary amines

In alcohol in which the oxygen atom is replaced by a sulphur atom is called?

Answer: Thiol

An aromatic compound which contained side chain hydroxyl group is called?

Answer: Phenol

The earliest nomenclature of the organic compounds were based on?

Answer: Their origin or properties

A functional group can be defined as?

Answer: An atom or group of atoms in a molecule which exhibit a characteristic chemical properties
