Read the passage below and then answer question 39 to 50.

Throughout the ages, human beings have had to suffer tragedies of war and diseases. However, the HIV/ AIDs pandemic appears to be the biggest and the most devastating pandemic of our times. Although the problem is left worldwide, the highest number of people with HIV live in Africa.

The first AIDs case in Kenya was diagnosed at the Kenyatta National Hospital in 1984. Today, we are like a people at war. Hundred are dying of AIDs everyday while many young people are being infected. It is the most terrible tragedy in our history. That is why the state declared the scourge a national disaster. Then, in 1999 the National Aids Control Council (NACC) was set up to fight the scourge.

When NACC was established, one of its objectives was to reduce the prevalence of HIV in the country by 20 -30% before the year 2005. Looking back one can say that lots of gains have been achieved in the war against AIDs.

Unfortunately, there are many stumbling blocks in the war. To start with, people living with HIV/ AIDs are treated unfairly. They are hated and discriminated against. This is because people associate HIV/ AIDs with sexual immorality.

Some people have the mistaken belief that AIDs is only a disease for prostitutes or promisious people. Yet it is known that the virus is transmitted in other non- sexual ways. Many people do not reveal their HIV status because they are afraid of being rejected by their family and community.

Others are discouraged from visiting Voluntary Counselling and Testing Centres (VCTs) to find out their HIV status. Yet with such information they are better placed to live positively with the virus. For example, those with children would be in a position to plan for the future of their children.

As HIV/ AIDs pandemic threatens to wipe out our youth we Kenyans must do something. We need to fight this menace by all means. It is a known fact that 9 out of 10 people with HIV got it through sex. So if the main way of transmission is through sex, then why not abstain? Abstinence never killed anyone.

A. Married men and women
B. Unmarried men and women

A. AIDs related infections are untreatable
B. people fear to visit VCT's
C. people living with HIV/ AIDs do not reveal their status
D. society has a negative attitude towards people with AIDs

42. One advantage of knowing one's HIV status is that _____
A. a medical doctor will be able to cure you
B. the person will not be discriminated against
C. one can live positively with the virus should the test turn positive

43. Many people deliberately refuse to attend VCT's because _____
A. they are immoral
B. they lead normal lives
C. they are discouraged by their friends and relatives

44. Some people living with HIV/ AIDs do not reveal their HIV status. Why?
A. They do not show signs of illness
