c. Rising very quickly to a high level	3.environmentalist	
d. The activity of cutting down trees for wood	4.insatiable	
e. **One** interested in protecting the environment	5.boom	

SECTION C READING COMPREHENSION (10marks)

Read the passage below and answer the questions which follow

We get disease from tiny organisms called germs. These can be viruses, bacteria or fungi. These tiny organisms enter through openings in our body such as our noses, mouths, ears, a uses and genitals. They can also get through our skin through cuts or bites. Germs can spread from one person to another through the air, for example when people sneeze or cough or shout. Some organisms also attach themselves to surfaces, so if we touch that surface, we will pick up the Germs as well.

The best way to prevent diseases is to practice good hygiene. Simple measures like washing hands thoroughly with water and soap, can make a huge difference, as this helps to kill Germs before they enter our bodies.

Good hygiene should also be followed when preparing and storing water and food. Contaminated water is a common source of dangerous Germs. Water that is collected from Wells and other sources should be treated before it is consumed.

Questions

a. Name two types of germs_____

b. What should you do when you sneeze or cough? Give a reason for your answer_____

_____

_____

c. Explain two ways through which Germs Can be spread_____

_____

_____
