🌹 The Existence of God: Proofs through Historical Events

1. Introduction

Throughout history, remarkable events have been reported that challenge our understanding of the natural world. These events often serve as compelling evidence of a higher power or divine intervention. One such event relates to the mysterious apparition of a parliamentarian, widely documented in the early 20th century, and analyzed by renowned researchers.

2. A Remarkable Event in 1905

Several reputable newspapers reported an extraordinary event in May 1905. According to The Daily News (May 17, 1905), The Evening News, The Daily Express (May 14), and The Empire (May 14), the apparition of Sir Major Carne Rasch, a member of Parliament, was seen during a parliamentary session.

What made this event particularly remarkable is that Sir Major Carne Rasch was confirmed to be bedridden due to an illness at the time of the apparition, confined to his room. The event sparked widespread debate and interest among the public and researchers on the supernatural.

3. Analysis by Psychic Researchers

The case attracted the attention of Richard Hodgson, president of the American Society for Psychical Research. Writing in the proceedings of the Society for Psychical Research, Hodgson examined these phenomena to explore their implications for the existence of the soul and its possible connection to a divine power.

Hodgson's work emphasized the need for a rigorous scientific approach to understanding apparitions and other supernatural events, presenting them as potential evidence of a spiritual dimension beyond our physical reality.

4. Personal Beliefs on Spiritual Communication

Another significant testimony comes from Léon Denis, who expresses without any doubt his belief in the reality of spiritual communications:

"I believe without any doubt that the spiritual communicators are indeed the personalities they say they are. That they have survived the change we call death and have communicated directly with us, the so-called living, through the intermediary of Mrs. Piper in a trance."

— Léon Denis

These words emphasize the idea that the spirits of the deceased can survive physical death and interact with the living through spiritual means, a view that aligns with the concept of a divine or spiritual dimension.

5. The Study of Radiant Matter by Sir William Crookes

Another significant event in the study of spiritual phenomena and invisible matter was the observation of the spirit of Katie King by Sir William Crookes, a scientist and member of the Royal Society. Using what was called Crookes' Tube, he began the study and discovery of radiant matter.

When Crookes sent 10,000 volts of electricity through the tube, he witnessed an unexpected result: the tube glowed with a green fluorescent light. Intrigued, he analyzed the mysterious energy flow and eventually deduced that the energy, composed of electrons that were not yet discovered at the time, usually traveled in straight lines and applied pressure on anything in its path.

6. Human Energy and Connection to the Spiritual World

It is also suggested that the human body emits radiation and possesses an energetic center, from which magnetic forces are activated by the will. These emanations extend through the power of will. This center of force and radiation could be the gateway to the spiritual world.

Human energies, tied to thought and intention, may enable a connection with invisible and spiritual dimensions, reinforcing the idea of a divine presence or a broader spiritual reality surrounding us.

7. The Fluidic Double and Apparitions

A complementary theory regarding spiritual manifestations is that of the fluidic double. It is suggested that the human body has a fluidic double which can detach from the physical body. This phenomenon could explain the apparitions of ghosts and encounters with the spirits of the dead. The fluidic double of a living person can detach from the physical body and appear in another location, sometimes at great distances. This manifestation is often interpreted as a telepathic effect, suggesting that thought and will can materialize in invisible spiritual dimensions.

8. Implications and Interpretations

This event, along with the studies of researchers like Hodgson, the beliefs of figures like Léon Denis, and Crookes' scientific discoveries, raises profound questions:

- Is the apparition evidence of the existence of the soul or a higher spiritual dimension?
- How do we reconcile such events with scientific understanding?
- Could these events be subtle confirmations of divine presence, guiding or intervening in human affairs? For many, these phenomena point to the possibility of a divine reality, inviting further exploration and reflection.

9. Conclusion

Historical accounts like this, documented and analyzed by respected researchers, urge us to explore the mysteries of existence. They encourage open-mindedness and curiosity about the possibility of a higher power governing the invisible aspects of our world.
