Computation of Results

The following terminologies and abbreviations are commonly used in the computation of Grade Point Average (GPA).

(a) Total Load Units (TLU): This is the total number of course units carried by a student in a particular semester. It is the summation of the load units on all courses carried during the semester. For example, a student who is taking 6 courses of 3 units each has a TLU of 18 for that semester.

(b) Cumulative Load Units over all the semesters from the beginning to date. A student who is prone to repeating courses will finish (if he does not drop out) with a higher CLU than his non-repeating colleagues, and will most likely require a longer time to complete requirements for the award of a degree.

(c) Total Credit Points (TCP): This is the sum of the products of course units and rating in each course, for the entire semester, or resist period. For example, consider a student who took 4 courses of 3 units each. Suppose the grades he obtained in the four courses were A, B, C and D respectively. The TCP of this student is obtained as:

$$(3 \times 5.0) + (3 \times 4.0) + (3 \times 3.0) + (3 \times 2.0) = 15.00 + 12.00 + 9.00 + 6.00 = 42.00.$$

Cumulative Credit Point (CCP): This is the total credit points (TCP) divided by the total load (TLU). For example, consider the students scores referred to above. His TCP is 42.00 and his TLU is 12. His GPA is, therefore $42/12 = 3.50$.

(d) The highest possible GPA that can be earned is 5.0 and that is when a student has earned a grade of A in every course during the semester. The lowest GPA obtained is 0.0

(e) Cumulative Grade Point Average (CGPA): This is not the summation of GPAs for all semester. Rather, it is the summation of TCP for all semesters to date, divided by the summation of TLU for the said semesters.
