

Mineralogy

A Geologist's Point of View

M. J. Hibbard

CONTENTS

Preface xiii

PART I

FORMATION OF MINERALS 1

CHAPTER 1

ATOMS, IONS, AND AQUEOUS SOLUTIONS 3

- Chapter Objectives 3
- Chapter Preview 4
- Elements in the Natural Environment 4
 - Native Elements 4
 - Chemical Compounds 5
- Electrochemical Properties of the Elements 5
 - The Nature of Chemical Bonding 5
 - Types of Chemical Bonds and their Bond Strengths 7
 - Electrochemical Factors in Chemical Bonding 8
 - Goldschmidt's Classification of the Elements 9
- Radii and Coordination of Atoms and Ions 10
 - The Size of Atoms and Ions 10
 - Radius Ratio and Coordination 10
 - Bonded Radii of Atoms and Electron Density Distribution 13
- Formation of Chemical Compounds 13
 - Chemical Reaction in Aqueous Solutions 13
 - Equilibrium in Relation to Both Eh (or pe) and pH 25

CHAPTER 2

CHEMICAL THERMODYNAMICS 26

- Chapter Objectives 26
- Chapter Preview 27
- Energy Changes in Chemical Reactions 27
 - Enthalpy and the First Law of Thermodynamics 27
 - Entropy and the Second Law of Thermodynamics 28
 - Gibbs Free Energy 29
 - Equations of State 30

Reaction Rate, Thermodynamic Equilibrium, and Mineral Stability 30

CHAPTER 3

CRYSTAL STRUCTURE 32

- Chapter Objectives 32
- Chapter Preview 33
- The Crystalline State 33
- The Crystal Lattice and the Unit Cell 35
- Motifs as Building Units of Crystal Structures 37
- Crystal Systems and Bravais Lattices 38
- Variable Chemical Composition of Minerals and Structural Limits 42
 - Ionic Substitution 42
 - Feldspar Solid Solution and Exsolution 43
 - Ion Exchange in Clay and Zeolite Minerals 45
- The Effect of Pressure and Temperature on Crystal Structure and Lattice Type 48
 - Mineral Stability 48
 - Mineral Metastability 48
 - Polymorphic Transformations 49
 - Ion Interchange Order-Disorder 52
 - Stacking Sequence Order-Disorder 54
- Deviations from Ideal Crystal Structures 54
- Crystal Structures Illustrating Crystal Systems, Bravais Lattices, Coordinated Motifs, and Z Numbers 55

CHAPTER 4

CRYSTALLIZATION AND DISSOLUTION OF MINERALS 66

- Chapter Objectives 66
- Chapter Preview 67
- Phase States and their Transformations 67
 - Gases, Liquids, and Solids 67
 - Some Variations of Phase State 67
- The Solid-Fluid Interface 68
 - Interface Activity 68
 - Crystal Surfaces—A Very Close Look 69
- Nucleation in Fluids 69

Crystal Growth in Fluids	71
Reasons for Crystal Growth	71
Mechanisms of Crystal Growth	73
Rates of Crystal Growth	73
Other Growth Morphologies	76
Substrate Growth	78
The Effect of Microgravity on Growth Morphology	79
Growth Zoning	80
Recrystallization in Solids	80
Nucleation, Subgrain Migration, and Subgrain Rotation	80
Morphology of Recrystallized Minerals	82
Recrystallization Growth Rate	82
Crystal Dissolution	83
The Timing of Crystallization and Dissolution in Multiphase Systems	83
Biocrystallization and Biodissolution of Minerals	84
Mineralogically Induced Organic Processes	85
Biologically Induced Mineralization	85
Biologically Controlled Mineralization	86
Biodissolution	86

PART

II

PHYSICAL ASPECTS OF MINERALS 89

CHAPTER 5

CRYSTAL MORPHOLOGY 90

Chapter Objectives	90
Chapter Preview	91
Miller Indices	91
Crystal Forms	94
Crystal Orientation	94
Identification of Forms	97
Crystal Habit	99
Nontwinned Crystals	99
Twinned Crystals	101
Crystal Aggregates	105
The Making of Stereograms	106
Stereographic Projection	106
Plotting Poles to Planar Surfaces on the Stereographic Net	107
Source of Angular Data	113

CHAPTER 6

PHYSICAL PROPERTIES OF MINERALS 116

Chapter Objectives	116
Chapter Preview	117
Optical Properties of Minerals	117
Diaphaneity	117
Color of Minerals	118
Origin of Color and Fluorescence Color	118
Streak of Minerals	120
Luster and Reflectance of Minerals	120

Mechanical Properties of Minerals	121
Deformation and Fragmentation of Minerals	121
Fracture of Minerals	123
Cleavage of Minerals	124
Parting of Minerals	128
Hardness of Minerals	130
Wear of Minerals	134
Feel of Minerals	134
Density of Minerals	135
Electromagnetic Properties of Minerals	135
Electrical and Thermal Properties	135
Magnetic Properties of Minerals	135

PART

III

CRYSTALLOGRAPHIC CLASSIFICATION OF MINERALS 139

CHAPTER 7

CRYSTAL CLASSES AND POINT GROUPS 141

Chapter Objectives	141
Chapter Preview	142
Point Group Symmetry	142
Symmetry Elements	142
Symmetry Content and the Hermann-Mauguin Symbols	145
Crystal Forms	146
The 32 Classes and Point Groups	149

CHAPTER 8

SPACE GROUPS 175

Chapter Objectives	175
Chapter Preview	176
The Space Lattice	176
The Internal Symmetry of Minerals	176
Fractional Coordinates	180
The Space Groups	184
Motif Symmetry in Selected Primitive Space Lattices	187
Examples of Minerals in Selected Space Groups	189

PART

IV

MINERALS IN THE GEOLOGIC ENVIRONMENT 207

CHAPTER 9

GEOTHERMOMETERS, GEOBAROMETERS, AND GEOCHRONOMETERS 209

Chapter Objectives	209
Chapter Preview	210
Elements and Isotopes in Minerals and Rocks	210

Elements and their Isotopes	210
Radioactive (Unstable) Isotopes	211
Stable Isotopes	213
Geothermometry	215
Mineral Phase Geothermometry	215
Solid-Solution Geothermometry	216
Trace Element Partitioning Geothermometry	217
Isotope Partitioning Geothermometry	220
Fluid Inclusion Geothermometry	220
Smectite/Illite Geothermometry	221
Geobarometry	222
Geochronology	222
Dating Techniques Based on Radioactive Decay	222
Dating Techniques Based on Radiation Exposure	227
Nonisotopic, Nonirradiation Methods of Dating	230

CHAPTER 10

MINERALS OF MAGMATIC SYSTEMS 231

Chapter Objectives	231
Chapter Preview	232
Magma Composition	232
Partial Melting of Source Rock	232
Separation of Magma from Its Source	232
Modification of Magma Composition	232
Crystallization of Magma	233
Reasons for Solidification of Magma	233
Fractional Crystallization	233
Magmatic Minerals	238
Temperature and Pressure Controls on Magmatic Minerals	238
Morphology of Magmatic Minerals	239

CHAPTER 11

MINERALS OF GRANITIC PEGMATITE SYSTEMS 242

Chapter Objectives	242
Chapter Preview	243
The Nature of Granitic Pegmatites	243
Mineral Distribution in Pegmatites	246
Conditions of Crystallization	249
Magma, Hydrous Magma, and Hydrothermal Solutions	249
Temperature and Pressure	250
Static or Dynamic Environment During Pegmatite Consolidation?	252
How Much Time Is Required for Pegmatite Consolidation?	252
Where Do Pegmatite Fluids Originate?	252
Paragenetic Sequence of Crystallization	253

CHAPTER 12

MINERALS OF HYDROTHERMAL AND FUMAROLIC SYSTEMS 254

Chapter Objectives	254
Chapter Preview	255

Hydrothermal Processes	255
Hot Aqueous Solutions	255
Precipitation of Minerals from Hydrothermal Solutions	256
Hydrothermal Mineral Paragenesis	258
The Ore Deposit Connection	262
The Environments of Hydrothermal Activity	263
The Fumarolic Environment	263
The Hot-Spring Environment	263
The Subaqueous Exhalative Environment	264
The Shallow Subsurface Environment	265
The Endomagmatic Volcanic Environment	267
The Subvolcanic Environment	268

CHAPTER 13

MINERALS OF SURFACE AND SUBSURFACE WATER SYSTEMS 271

Chapter Objectives	271
Chapter Preview	272
Minerals of Freshwater Lacustrine Environments	272
Minerals of Saline and Alkaline Lacustrine Environments	272
Chloride/Sulfate/Borate Materials	272
Carbonate Materials	275
Minerals of the Open Marine Environments	276
Phosphatic Materials	276
Siliceous Materials	277
Manganiferous Materials	277
Carbonaceous Materials	277
Sulfide/Sulfate Materials	277
Minerals of the Restricted Marine Environment	278
Chloride/Sulfate Materials	278
Carbonate Materials	279
Minerals of the Subsurface Water Environments	279
Chloride/Sulfate Materials	280
Carbonate Materials	282
Phosphatic Materials	284
Siliceous Materials	285
Aluminous Materials	287
Ferruginous Materials	289
Manganiferous Materials	291
Carbonaceous Materials	291
Sulfurous Materials	292
Materials Restricted to the Vadose (Unsaturated) Subsurface Environment	292
Chloride/Sulfate Materials	292
Carbonate Materials	294
Siliceous Materials	294
Phosphatic, Aluminous, Ferruginous, Manganiferous, and Carbonaceous Materials	294
Sulfurous Materials	294
Industrial Applications and Environmental Hazards	304
Natural Fixation of Heavy Metals by Iron Oxyhydroxides	304
Clay Minerals in the Anthropogenic Environment	305
Putting Bacteria to Work	305

CHAPTER 14

MINERALS OF METAMORPHIC AND PARAMETAMORPHIC SYSTEMS 307

- Chapter Objectives 307
- Chapter Preview 308
- Protoliths of Metamorphism 308
- Metamorphic Recrystallization 308
- Metamorphic Mineral Assemblages 310
 - The Lower Limit of Metamorphism 310
 - P-T* Paths of Metamorphism 311
- Fabric and Texture of Metamorphic Rocks 312
- Importance of the Fluid Phase in Metamorphism 314
 - The SiO_2 -CaO- CO_2 System 315
- Ultrahigh-Pressure (UHP) Metamorphism 315
- Rates of Metamorphic Recrystallization and Reaction 317

CHAPTER 15

MINERALS OF THE MOON, METEORITES, AND IMPACT CRATERS 319

- Chapter Objectives 319
- Chapter Preview 320
- Meteorites—Clues to the Origin of the Solar System 321
- Craters and Impactites—A Record of Impacting
Meteoroids 323
- Planetary Materials 323
 - A Fragmentary Record 323
 - Interplanetary Dust Particles (IDPs) 325
 - Chondrites 325
 - Rocks and Minerals of the Moon 327
 - Martian Rocks and Minerals 327
 - Asteroid Rocks and Minerals 328
 - Earth Impactites 328
 - Shock Magmatism 328
 - Shock Metamorphism 330

PART

V

ANALYTICAL INSTRUMENTATION AND TECHNIQUES 335

CHAPTER 16

CHEMICAL AND PHYSICAL DETERMINATIONS 337

- Chapter Objectives 337
- Chapter Preview 338
- Classification of Methods 338
- Sample Environment and Preparation 339
- Data Processing 340
- Instrumentation and Applications 340
 - AA Atomic Absorption Spectroscopy (AAS) 340
 - AES Auger-Electron Spectroscopy 341

- AFM Atomic Force Microscopy 341
- CL Cathodoluminescence Microscopy (CLM) 341
- CXT Computed X-ray Tomography 341
- DD Density Determinations 342
- DIC Differential Interference Contrast
Microscopy 343
- DLI Differential Laser Interferometry 343
- DSC Differential Scanning Calorimetry 343
- DTA Differential Thermal Analysis 344
- ED Electron Diffraction 344
- EELS Electron Energy-Loss Spectroscopy 344
- EIS Electrochemical Impedance
Spectroscopy 344
- EMPA Electron Microprobe Analysis 344
- EPR Electron Paramagnetic Resonance Spectrometry
(EPRS) 344
- ES Emission Spectroscopy 345
- FFT Flame and Fusion Testing 345
- FIGM Fluid Inclusion Geothermometric
Microscopy 345
- FS Fluorescence Spectroscopy 345
- GRS Gamma-Ray Spectrometry 348
- GWCA Gravimetric Wet Chemical Analysis 348
- HDT Hardness Testing 348
- ICP Inductively Coupled Plasma Analysis 349
- IR Infrared Spectroscopy (IRS) 349
- LIM Laser-Interference Microscopy 351
- LS Laser Scattering 351
- MMA Mineralogical Modal Analysis 351
- MBS Mössbauer Spectroscopy 351
- MFM Magnetic Force Microscopy 351
- MS Mass Spectrometry 351
- MV Molar Volume Calculation 353
- NAA Neutron Activation Analysis 353
- NMR Nuclear Magnetic Resonance Spectroscopy
(NMRS) 353
- NPD Neutron Powder Diffraction 354
- OM Optical Microscopy 354
- OSM Optical Scanning Microscopy 354
- PCM Phase Contrast Microscopy 354
- PES Photo Electron Spectroscopy 354
- PIGE Proton-Induced Gamma Ray Emission
Spectroscopy (PIGME) 354
- PIXE Proton-Induced X-ray Emission Spectroscopy
(PIXES) 354
- PS Polariscopy 355
- RMM Remnant Magnetism Measurements 355
- RR Reflectance Refractometry 356
- RS Raman Spectroscopy (RAS) 356
- SEM Scanning Electron Microscopy 356
- SPMA Scanning Proton-Microprobe Analysis 358
- STM Scanning Tunneling Microscopy 359
- SXRT Synchrotron X-ray Topography 359
- TEM Transmission Electron Microscopy 359
- TGA Thermal Gravimetric Analysis 359
- UI Ultrasonic Interferometry 360
- UVVS UV-Visible Spectroscopy 360

VNIRS Visible and Near-Infrared Reflectance Spectroscopy	360
XAS X-ray Absorption Spectroscopy	360
XPS X-ray Photoelectron Spectroscopy	360
XRL X-ray Luminescence	360
XRF X-ray Fluorescence Spectroscopy (XRFS)	361

CHAPTER 17

POWDER AND SINGLE-CRYSTAL X-RAY DIFFRACTION 363

Chapter Objectives	363
Chapter Preview	364
Diffraction of X-rays by Crystalline Materials (XRD)	364
The Bragg Equation and Its Geometric Representation	364
Indexing Diffraction Data	365
X-ray Powder Diffraction (XRD or XRPD)	367
The Powder Methods	367
Peak Shape, Peak Position, and Background	369
Random and Nonrandom Grain Orientation	371
About the Powder Diffraction Data Bank	371
Examples of XRPD Mineral Identification	372
Clay Minerals—A Special Case of Great Importance	376
Quantitative Chemical Analysis by Powder XRD	377
Modal Analysis by Powder XRD	377
Single-Crystal Diffraction and Determination of Crystal Structure	377
Laue Patterns	377
Indexing Single-Crystal Diffraction Patterns	378
Single-Crystal Diffraction at Elevated Pressure	382

CHAPTER 18

OPTICAL MINERALOGY 383

Chapter Objectives	383
Chapter Preview	384
Polarizing Optical Microscopy	384
Optical Determination of Minerals	384
Crystal Morphology	384
Susceptibility to Alteration	385
Apparent Hardness	385
Planar and Nonplanar Breakage	387
Exsolution Textures	387
Relative Refractive Index and Reflectance	387
Color and Pleochroism	389
Extinction and Extinction Positions	390
Twinning and Deformational Features	392
Maximum Presenting Interference Colors and Internal Reflections	393
Length-Fast and Length-Slow Determinations	395
Conoscopic Methods of Mineral Identification	395

PART

VI

MINERAL SYSTEMATICS AND DESCRIPTIONS 399

CHAPTER 19

CHEMICAL-STRUCTURAL CLASSIFICATION OF MINERALS 400

Chapter Objectives	400
Chapter Preview	401
Native Elements	401
Intermetallics and Alloys	402
Antimonides	402
Arsenides	402
Carbides	403
Nitrides	403
Phosphides	403
Silicides	403
Selenides	403
Tellurides	403
Sulfides	403
Sulfosalts	403
Sulfoxides	404
Oxides	404
Hydroxides, Hydroxyl Oxides, Hydrrous Oxides	405
Halogenides (Halides)	405
Acetates	406
Antimonates	406
Antimonites	406
Arsenates	407
Arsenites	407
Borates	407
Carbonates	407
Chromates	407
Citrates	407
Germanates	407
Iodates	407
Mellitates	407
Molybdates	407
Niobates	408
Nitrates	408
Organic Compounds, Hydrocarbons, Resins	408
Oxalates	409
Phosphates	409
Selenates	410
Selenites	410
Sulfates	410
Sulfites	410
Tantalates	410
Tellurates	410
Tellurites	410
Thiocyanates	410
Tungstates	410
Uranates and Uranites	410
Vanadates and Vanadine Oxides and Hydroxides	410
Silicates	411

CHAPTER 20

MINERAL DESCRIPTIONS—AN ALPHABETICAL
CATALOG 421*Appendix A Mineral Determination Table 492**Appendix B Mineral and Rock Photography 510**Appendix C Classification of Magmatic, Granitic
Pegmatite, Hydrothermal, Metamorphic, and Clastic
Sedimentary Rocks and Minerals 513**Appendix D Chemical, Geochemical, and Biochemical
Properties of the Elements 518**Appendix E X-Ray Diffraction 2 θ /d-Spacing
Conversion Table 527**Appendix F Geologic Time Scale 530**Appendix G Grain And Mesh Sizes 532**Appendix H Computer Programs And Software For
Crystallography And Mineralogy 533**References 534**Subject Index 548**Mineral Index 558*
