

The background is a solid dark green color. It features several abstract, wavy white lines that sweep across the frame. One prominent line starts from the left edge, curves upwards and then downwards, passing behind the text. Another line starts from the bottom right and curves upwards towards the center. There are also some lighter green, semi-transparent circular or oval shapes in the background, adding depth to the design.

Definition of Amputation

AN AMPUTATION IS THE COMPLETE REMOVAL OF PART OF THE BODY. THIS CAN HAPPEN DUE TO AN ACCIDENT OR INTENTIONALLY THROUGH SURGERY. SURGICAL AMPUTATION NORMALLY HAPPENS WHEN A PART OF A LIMB IS VERY BADLY INJURED SO IT MUST BE REMOVED

Types of Amputation

First type

Accidental

Second type

Surgery

The First type of amputation, Is that when it happen through an accident , and the second type when its very badly injured and need to get removed by a surgery .

Mary is a 10 year old girl, as she was coming back from school she went to eat dinner instantly, and after sometime she went to the garden. The garden is a big piece of green land that has a little playground with a slide and swing. After her dad mowed the lawn with the lawn mower, he forgot to put it back in the garage and left it besides mary's playground. After a while of playing mary gets curious and starts to tap each button on the lawn mower, one of them turns it on and the other increases it's power. Mary made the lawn mower move forward to where she was sitting and unfortunately her leg was amputated. The whole leg was shredded so the possibility of reattaching the limb is impossible. Mary is a cripple now.

Steps to provide first aid for the amputation limb

First Step

Call an ambulance , and
get the first aid kit

Second Step

Wash your hands

Third Step

Wear PPE such as gloves
and masks

Fourth Step

Stop the bleeding from the
wound by applying
pressure (If object is
unremovable then add
pressure surrounding the
area not on the object
directly)

Fifth Step

Find the amputated part

Sixth Step

Make the person lay down

Seventh Step

Rinse the amputated part
with clean water

Eighth Step

Wrap with clean dressing
(dressing is a guaze or
clean clothes)

Ninth Step

Put the amputated limb in a plastic bag and put the bag in another bag of ice and cold water

Tenth Step

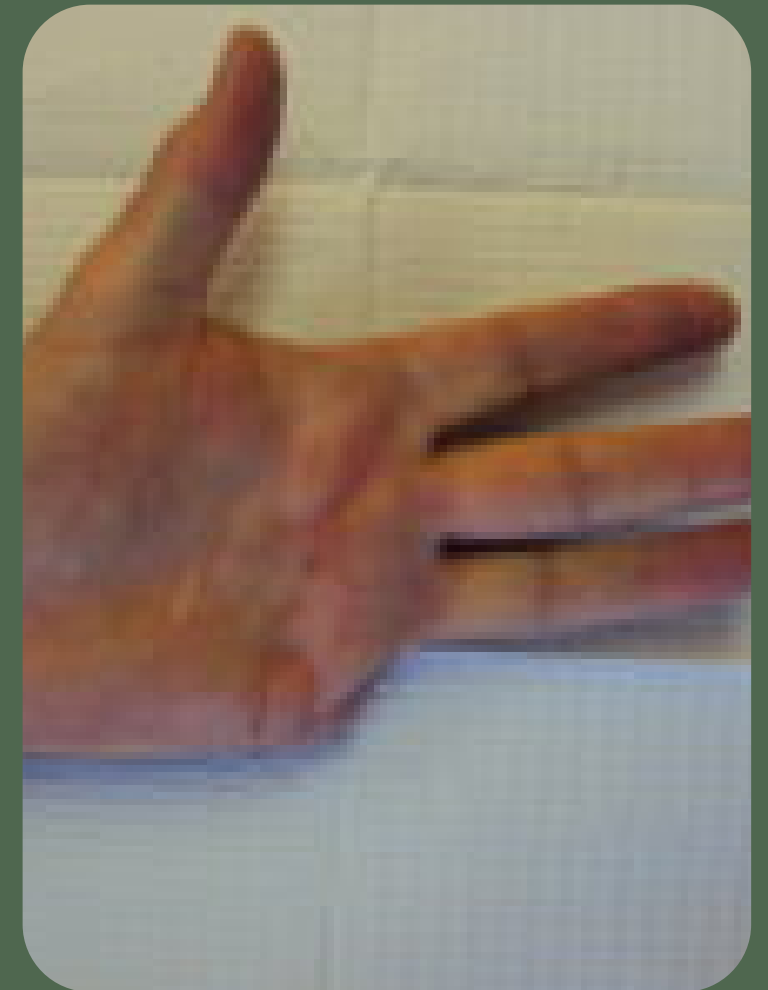

Go to the hospital and keep a note when the puncture injury happens (it happens in the legs or hands)

Describe one thing you should not do with the amputated finger or toe if you intend on re-attaching it and explain why you should not do this

YOU MUST ATTEND TO THE INJURED FIRST AND THEN PAY ATTENTION TO THE LIMB BECAUSE THE PERSON'S LIFE IS WAY MORE IMPORTANT THAN THE REATTACHMENTS

DO NOT POSITION THE INJURED PERSON INCORRECTLY IF THEY HAVE BEEN IN AN ACCIDENT BECAUSE A SMALL MOVE TO THE SPINE OR ANY BROKEN BONE COULD CAUSE ACTIVITY LIMITATION
