Testlet 1

Case Study

This is a case study. **Case studies are not timed separately. You can use as much exam times as you would like to complete each case.** However, there may be additional studies and sections on this exam. You must manage your time to ensure that you are able to complete all questions included on this exam in the time provided.

To answer the questions included in a case study, you will need to reference information that is provided in the case study. Case studies might contain exhibits and other resources that provide more information about the scenario that is described in the case study. Each question is independent of the other questions in this case study.

At the end of this case study, a review screen will appear. This screen allows you to review your answers and to make changes before you move to the next section of the exam. After you begin a new section, you cannot return to this section.

To start the case study
To display the first question in this case study, click the Next **button**. Use the buttons in the left pane to explore the content of the case study before you answer the questions. Clicking these buttons displays information such as business requirements, existing environment, and problem statements. When you are ready to answer a question, click the **Question** button to return to the question.

Overview

Existing Environment

Fabrikam, Inc. is a distribution company that has 500 employees and 100 contractors.

Active Directory

The network contains an Active Directory forest named fabrikam.com. The forest is synced to Microsoft Azure Active Directory (Azure AD). All the employees are assigned Microsoft 365 E3 licenses.

The domain contains a user account for an employee named User10.

Client Computers

All the employees have computers that run Windows 10 Enterprise. All the computers are installed without Volume License Keys. Windows 10 license keys are never issued.

All the employees register their computer to Azure AD when they first receive the computer.

User10 has a computer named Computer10.

All the contractors have their own computer that runs Windows 10. None of the computers are joined to Azure AD.

Operational Procedures

Fabrikam has the following operational procedures:

- Updates are deployed by using Windows Update for Business.
- When new contractors are hired, administrators must help the contactors configure the following settings on their computer:
  - User certificates
  - Browser security and proxy settings
  - Wireless network connection settings

Security policies

The following security policies are enforced on all the client computers in the domain:

- All the computers are encrypted by using BitLocker Drive Encryption (BitLocker). BitLocker recovery information is stored in Active Directory and Azure AD.
- The local Administrators group on each computer contains an enabled account named LocalAdmin.
- The LocalAdmin account is managed by using Local Administrator Password Solution (LAPS).

Problem Statements

Fabrikam identifies the following issues:

- Employees in the finance department use an application named Application1. Application1 frequently crashes due to a memory error. When Application1 crashes, an event is written to the application log and an administrator runs a script to delete the temporary files and restart the application.
- When employees attempt to connect to the network from their home computer, they often cannot establish a VPN connection because of misconfigured VPN settings.
- An employee has a computer named Computer11. Computer11 has a hardware failure that prevents the computer from connecting to the network.
- User10 reports that Computer10 is not activated.

Technical requirements

Fabrikam identifies the following technical requirements for managing the client computers:

- Provide employees with a configuration file to configure their VPN connection.
- Use the minimum amount of administrative effort to implement the technical requirements.
- Identify which employees' computers are noncompliant with the Windows Update baseline of the company.
- Ensure that the service desk uses Quick Assist to take remote control of an employee's desktop during support calls.
- Automate the configuration of the contractors' computers. The solution must provide a configuration file that the contractors can open from a Microsoft SharePoint site to apply the required configurations.

QUESTION 1
HOTSPOT

You need to implement a solution to configure the contractors' computers.

What should you do? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

Hot Area:

Correct Answer:

Section: [none]
Explanation

Explanation/Reference:
References:
https://docs.microsoft.com/en-us/windows/configuration/provisioning-packages/provisioning-install-icd

QUESTION 2
You need to ensure that User10 can activate Computer10.

What should you do?

A. Request that a Windows 10 Enterprise license be assigned to User10, and then activate Computer10.
B. From the Microsoft Deployment Toolkit (MDT), add a Volume License Key to a task sequence, and then redeploy Computer10.
C. From System Properties on Computer10, enter a Volume License Key, and then activate Computer10.
D. Request that User10 perform a local AutoPilot Reset on Computer10, and then activate Computer10.

Correct Answer: D
Section: [none]
Explanation

Explanation/Reference:
References:
https://docs.microsoft.com/en-us/windows/deployment/windows-autopilot/windows-autopilot-requirements-licensing

Question Set 2

QUESTION 1
Your company has an isolated network used for testing. The network contains 20 computers that run Windows 10. The computers are in a workgroup. During testing, the computers must remain in the workgroup.

You discover that none of the computers are activated.

You need to recommend a solution to activate the computers without connecting the network to the Internet.

What should you include in the recommendation?

A. Volume Activation Management Tool (VAMT)
B. Key Management Service (KMS)
C. Active Directory-based activation
D. the **Get-WindowsDeveloperLicense** cmdlet

Correct Answer: B
Section: [none]
Explanation

Explanation/Reference:
References:
https://docs.microsoft.com/en-us/windows/deployment/volume-activation/activate-using-key-management-service-vamt

QUESTION 2
You plan to deploy Windows 10 to 100 secure computers.

You need to select a version of Windows 10 that meets the following requirements:

- Uses Microsoft Edge as the default browser
- Minimizes the attack surface on the computer
- Supports joining Microsoft Azure Active Directory (Azure AD)
- Only allows the installation of applications from the Microsoft Store

What is the best version to achieve the goal? More than one answer choice may achieve the goal. Select the **BEST** answer.

A. Windows 10 Pro in S mode
B. Windows 10 Home in S mode
C. Windows 10 Pro
D. Windows 10 Enterprise

Correct Answer: C
Section: [none]
Explanation

Explanation/Reference:
References:
https://www.microsoft.com/en-za/windows/compare

QUESTION 3
DRAG DROP

You have a computer named Computer1 that runs Windows 7. Computer1 has a local user named User1 who has a customized profile.

On Computer1, you perform a clean installation of Windows 10 without formatting the drives.

You need to migrate the settings of User1 from Windows7 to Windows 10.

Which two actions should you perform? To answer, drag the appropriate actions to the correct targets. Each action may be used once, more than once, or not at all. You may need to drag the split bar between panes or scroll to view content.

NOTE: Each correct selection is worth one point.

Select and Place:

Correct Answer:

Section: [none]
Explanation

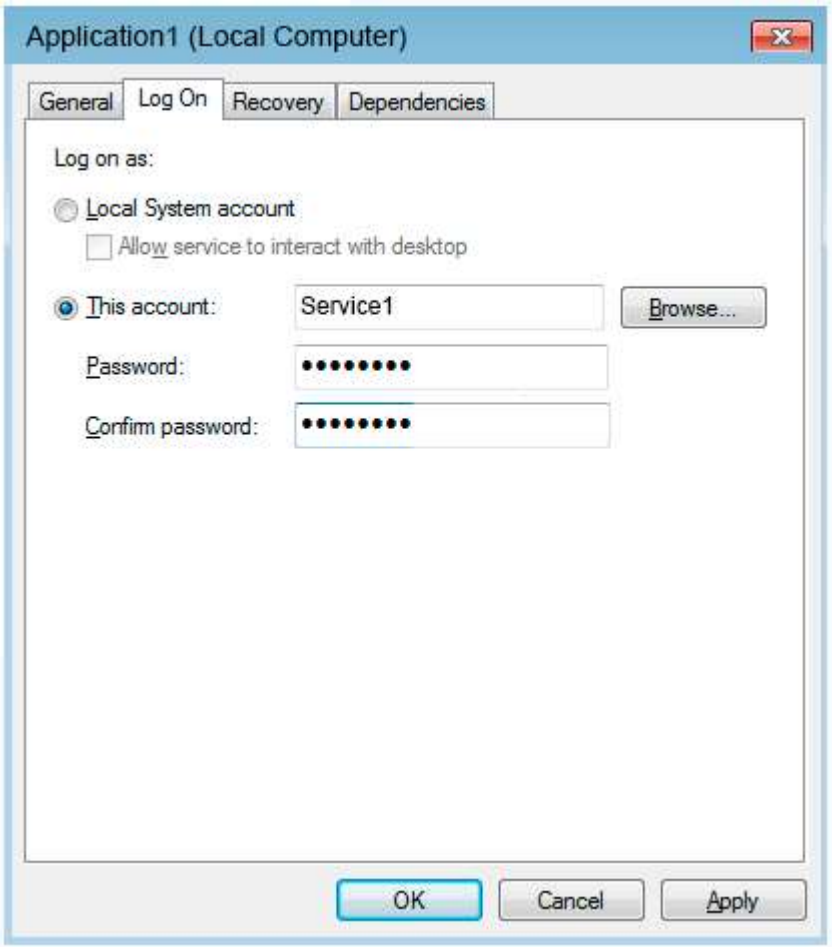

Explanation/Reference:
References:
https://docs.microsoft.com/en-us/windows/deployment/usmt/usmt-how-it-works

QUESTION 4
Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution.

After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.

You have a computer named Computer1 that runs Windows10.

A service named Application1 is configured as shown in the exhibit.

You discover that a user used the Service1 account to sign in to Computer1 and deleted some files.

You need to ensure that the identity used by Application1 cannot be used by a user to sign in to sign in to the desktop on Computer1. The solution must use the principle of least privilege.

Solution: On Computer1, you configure Application1 to sign in as the LocalSystem account and select the Allow service to interact with desktop check box. You delete the Service1 account.

Does this meet the goal?

A. Yes
B. No

Correct Answer: B
Section: [none]
Explanation

Explanation/Reference:

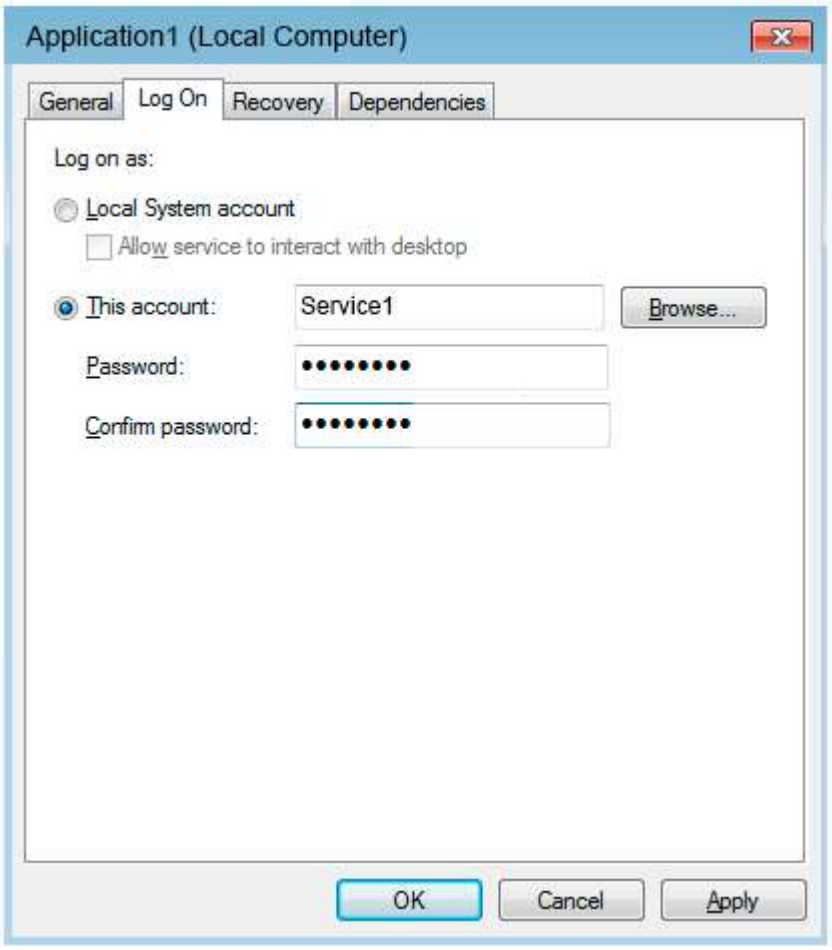

QUESTION 5
Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution.

After you answer a question in this section, you will NOT be able to return to it. As a result, these

questions will not appear in the review screen.

You have a computer named Computer1 that runs Windows 10.

A service named Application1 is configured as shown in the exhibit.

You discover that a user used the Service1 account to sign in to Computer1 and deleted some files.

You need to ensure that the identity used by Application1 cannot be used by a user to sign in to sign in to the desktop on Computer1. The solution must use the principle of least privilege.

Solution: On Computer1, you assign Service1 the deny log on locally user right.

Does this meet the goal?

A. Yes
B. No

Correct Answer: B
Section: [none]
Explanation

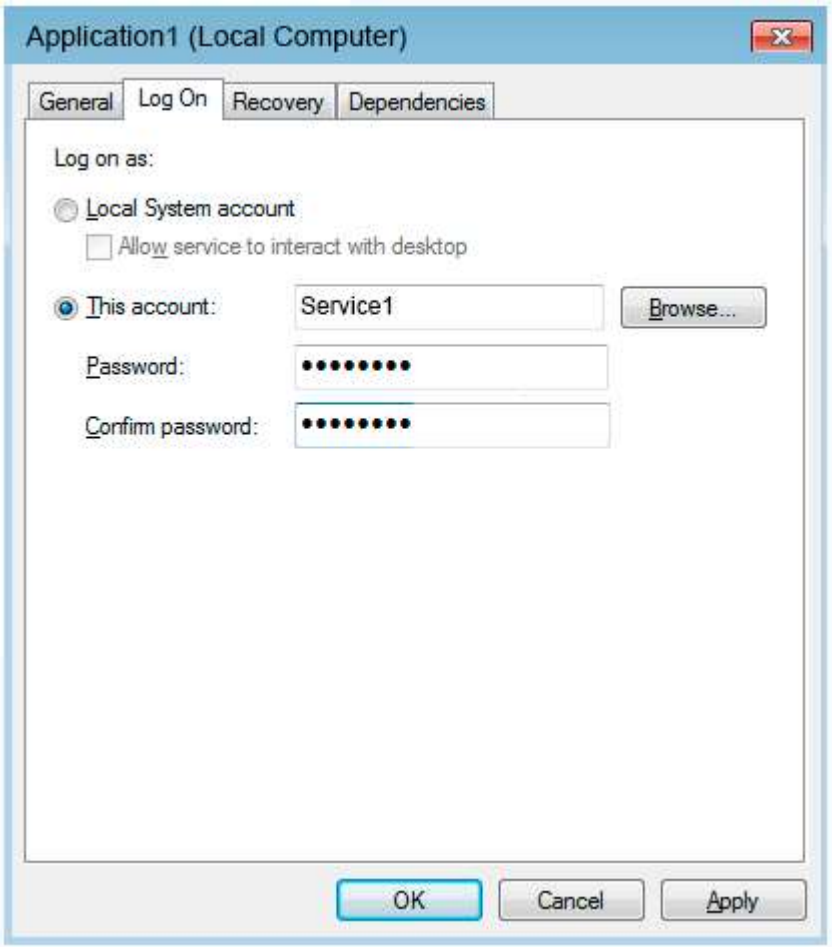

Explanation/Reference:
References:
https://docs.microsoft.com/en-us/windows/security/threat-protection/security-policy-settings/deny-log-on-locally

QUESTION 6
Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution.

After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.

You have a computer named Computer1 that runs Windows 10.

A service named Application1 is configured as shown in the exhibit.

You discover that a user used the Service1 account to sign in to Computer1 and deleted some files.

You need to ensure that the identity used by Application1 cannot be used by a user to sign in to sign in to the desktop on Computer1. The solution must use the principle of least privilege.

Solution: On Computer1, you assign Service1 the deny log on as a service user right.

Does this meet the goal?

A. Yes
B. No

Correct Answer: A
Section: [none]

Explanation

Explanation/Reference:
References:
https://docs.microsoft.com/en-us/windows/security/threat-protection/security-policy-settings/deny-log-on-as-a-service

QUESTION 7
You have a Microsoft Azure Active Directory (Azure AD) tenant.

Some users sign in to their computer by using Windows Hello for Business.

A user named User1 purchases a new computer and joins the computer to Azure AD.

User1 attempts to configure the sign-in options and receives the error message shown in the exhibit.

You open **Device Manager** and confirm that all the hardware works correctly.

You need to ensure that User1 can use Windows Hello for Business facial recognition to sign in to the computer.

What should you do first?

A. Purchase an infrared (IR) camera.
B. Upgrade the computer to Windows 10 Enterprise.
C. Enable UEFI Secure Boot.
D. Install a virtual TPM driver.

Correct Answer: B
Section: [none]
Explanation

Explanation/Reference:
References:
https://docs.microsoft.com/en-us/windows/security/identity-protection/hello-for-business/hello-planning-guide

QUESTION 8
Your company uses Microsoft Deployment Toolkit (MDT) to deploy Windows 10 to new computers.

The company purchases 1,000 new computers.

You need to ensure that the Hyper-V feature is enabled on the computers during the deployment.

What are two possible ways to achieve the goal? Each correct answer presents part of the solution.

NOTE: Each correct selection is worth one point.

A. Add a task sequence step that adds a provisioning package.
B. In a Group Policy object (GPO), from Computer Configuration, configure Application Control Policies.
C. Add a custom command to the Unattend.xml file.
D. Add a configuration setting to Windows Deployment Services (WDS).
E. Add a task sequence step that runs `dism.exe`.

Correct Answer: AC
Section: [none]
Explanation

Explanation/Reference:
References:
https://docs.microsoft.com/en-us/windows/deployment/deploy-windows-mdt/create-a-windows-10-reference-image

QUESTION 9
Your network contains an Active Directory domain that is synced to a Microsoft Azure Active Directory (Azure AD) tenant.

Your company purchases a Microsoft 365 subscription.

You need to migrate the Documents folder of users to Microsoft OneDrive for Business.

What should you configure?

A. One Drive Group Policy settings
B. roaming user profiles
C. Enterprise State Roaming
D. Folder Redirection Group Policy settings

Correct Answer: A
Section: [none]
Explanation

Explanation/Reference:
References:
https://docs.microsoft.com/en-us/onedrive/redirect-known-folders?redirectSourcePath=%252fen-us%252farticle%252fredirect-windows-known-folders-to-onedrive-e1b3963c-7c6c-4694-9f2f-fb8005d9ef12

Testlet 1

Case Study

This is a case study. **Case studies are not timed separately. You can use as much exam times as you would like to complete each case.** However, there may be additional studies and sections on this exam. You must manage your time to ensure that you are able to complete all questions included on this exam in the time provided.

To answer the questions included in a case study, you will need to reference information that is provided in the case study. Case studies might contain exhibits and other resources that provide more information about the scenario that is described in the case study. Each question is independent of the other questions in this case study.

At the end of this case study, a review screen will appear. This screen allows you to review your answers and to make changes before you move to the next section of the exam. After you begin a new section, you cannot return to this section.

To start the case study
To display the first question in this case study, click the Next **button**. Use the buttons in the left pane to explore the content of the case study before you answer the questions. Clicking these buttons displays information such as business requirements, existing environment, and problem statements. When you are ready to answer a question, click the **Question** button to return to the question.

Overview

Existing Environment

Fabrikam, Inc. is a distribution company that has 500 employees and 100 contractors.

Active Directory

The network contains an Active Directory forest named fabrikam.com. The forest is synced to Microsoft Azure Active Directory (Azure AD). All the employees are assigned Microsoft 365 E3 licenses.

The domain contains a user account for an employee named User10.

Client Computers

All the employees have computers that run Windows 10 Enterprise. All the computers are installed without Volume License Keys. Windows 10 license keys are never issued.

All the employees register their computer to Azure AD when they first receive the computer.

User10 has a computer named Computer10.

All the contractors have their own computer that runs Windows 10. None of the computers are joined to Azure AD.

Operational Procedures

Fabrikam has the following operational procedures:

- Updates are deployed by using Windows Update for Business.
- When new contractors are hired, administrators must help the contactors configure the following settings on their computer:
  - User certificates
  - Browser security and proxy settings
  - Wireless network connection settings

Security policies

The following security policies are enforced on all the client computers in the domain:

- All the computers are encrypted by using BitLocker Drive Encryption (BitLocker). BitLocker recovery information is stored in Active Directory and Azure AD.
- The local Administrators group on each computer contains an enabled account named LocalAdmin.
- The LocalAdmin account is managed by using Local Administrator Password Solution (LAPS).

Problem Statements

Fabrikam identifies the following issues:

- Employees in the finance department use an application named Application1. Application1 frequently crashes due to a memory error. When Application1 crashes, an event is written to the application log and an administrator runs a script to delete the temporary files and restart the application.
- When employees attempt to connect to the network from their home computer, they often cannot establish a VPN connection because of misconfigured VPN settings.
- An employee has a computer named Computer11. Computer11 has a hardware failure that prevents the computer from connecting to the network.
- User10 reports that Computer10 is not activated.

Technical requirements

Fabrikam identifies the following technical requirements for managing the client computers:

- Provide employees with a configuration file to configure their VPN connection.
- Use the minimum amount of administrative effort to implement the technical requirements.
- Identify which employees' computers are noncompliant with the Windows Update baseline of the company.
- Ensure that the service desk uses Quick Assist to take remote control of an employee's desktop during support calls.
- Automate the configuration of the contractors' computers. The solution must provide a configuration file that the contractors can open from a Microsoft SharePoint site to apply the required configurations.

QUESTION 1
You need to sign in as LocalAdmin on Computer11.

What should you do first?

A. From the LAPS UI tool, view the administrator account password for the computer object of Computer11.
B. From Local Security Policy, edit the policy password settings on Computer11.
C. From the LAPS UI tool, reset the administrator account password for the computer object of Computer11.
D. From Microsoft Intune, edit the policy password settings on Computer11.

Correct Answer: A
Section: [none]

Overview

Contoso, Ltd. is a consulting company that has a main office in Montreal and two branch offices in Seattle and New York.

Contoso has IT, human resources (HR), and finance departments.

Contoso recently opened a new branch office in San Diego. All the users in the San Diego office work from home.

Existing environment

Contoso uses Microsoft 365.

The on-premises network contains an Active Directory domain named contoso.com. The domain is synced to Microsoft Azure Active Directory (Azure AD).

All computers run Windows 10 Enterprise.

You have four computers named Computer1, Computer2, Computer3, and ComputerA. ComputerA is in a workgroup on an isolated network segment and runs the Long Term Servicing Channel version of Windows 10. ComputerA connects to a manufacturing system and is business critical. All the other computers are joined to the domain and run the Semi-Annual Channel version of Windows 10.

In the domain, you create four groups named Group1, Group2, Group3, and Group4.

Computer2 has the local Group Policy settings shown in the following table.

Policy	Security Setting
Access this computer from the network	Group1
Deny access to this computer from the network	Group2
Allow log on through Remote Desktop Services	Group3
Deny log on through Remote Desktop Services	Group4

The computers are updated by using Windows Update for Business.

The domain has the users shown in the following table.

Name	Member of
User1	Domain Admins, Domain Users
User2	Administrators, Domain Users
User3	Account Operators, Domain Users
User4	Domain Users
User5	Domain Users, Guests
User6	Group2, Group3, Domain Users

Computer1 has the local users shown in the following table.

Name	Member of
User11	Administrators
User12	Users
User13	Guests

Requirements

Planned Changes

Contoso plans to purchase computers preinstalled with Windows 10 Pro for all the San Diego office users.

Technical requirements

Contoso identifies the following technical requirements:

- The computers in the San Diego office must be upgraded automatically to Windows 10 Enterprise and must be joined to Azure AD the first time a user starts each new computer. End users must not be required to accept the End User License Agreement (EULA).
- Helpdesk users must be able to troubleshoot Group Policy object (GPO) processing on the Windows 10 computers. The helpdesk users must be able to identify which Group Policies are applied to the computers.
- Users in the HR department must be able to view the list of files in a folder named D:\Reports on Computer3.
- ComputerA must be configured to have an Encrypting File System (EFS) recovery agent.
- Quality update installations must be deferred as long as possible on ComputerA.
- Users in the IT department must use dynamic look on their primary device.
- User6 must be able to connect to Computer2 by using Remote Desktop.
- The principle of least privilege must be used whenever possible.
- Administrative effort must be minimized whenever possible.
- Assigned access must be configured on Computer1.

QUESTION 1
HOTSPOT

You need to meet the technical requirements for the helpdesk users.

What should you do? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

Hot Area:

Correct Answer:

Section: [none]
Explanation

Explanation/Reference:

Question Set 3

QUESTION 1
Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution.

After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.

You have a computer named Computer1 that runs Windows 10. The computer contains a folder. The folder contains sensitive data.

You need to log which user reads the contents of the folder and modifies and deletes files in the folder.

Solution: From the properties of the folder, you configure the **Auditing** settings and from Audit Policy in the local Group Policy, you configure Audit object access.

Does this meet the goal?

A. Yes
B. No

Correct Answer: A
Section: [none]
Explanation

Explanation/Reference:
References:
https://www.netwrix.com/how_to_detect_who_changed_file_or_folder_owner.html

QUESTION 2
Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution.

After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.

You have a computer named Computer1 that runs Windows 10. The computer contains a folder. The folder contains sensitive data.

You need to log which user reads the contents of the folder and modifies and deletes files in the folder.

Solution: From the properties of the folder, you configure the **Auditing** settings and from the Audit Policy in the local Group Policy, you configure Audit directory service access.

Does this meet the goal?

A. Yes
B. No

Correct Answer: B
Section: [none]
Explanation

Explanation/Reference:

https://www.netwrix.com/how_to_detect_who_changed_file_or_folder_owner.html

QUESTION 3
HOTSPOT

You have a computer named Computer 1 that runs Windows 10.

You turn on System Protection and create a restore point named Point1.

You perform the following changes:

- Add four files named File1.txt, File2.dll, File3.sys, and File4.exe to the desktop.
- Run a configuration script that adds the following four registry keys:
  - Key1 to HKEY_CURRENT_USER
  - Key2 to HKEY_CLASSES_ROOT
  - Key3 to HKEY_LOCAL_MACHINE\SYSTEM
  - Key4 to HKEY_CURRENT_CONFIG

You restore Point1.

Which files and registry keys are removed? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

Correct Answer:

Section: [none]
Explanation

Explanation/Reference:
References:
https://docs.microsoft.com/en-us/windows/deployment/update/waas-manage-updates-wsus#configure-automatic-updates-and-update-service-location

QUESTION 5
Your network contains an Active Directory domain. The domain contains 1,000 computers that run Windows 10.

You discover that when users are on their lock screen, they see a different background image every day, along with tips for using different features in Windows 10.

You need to disable the tips and the daily background image for all the Windows 10 computers.

Which Group Policy settings should you modify?

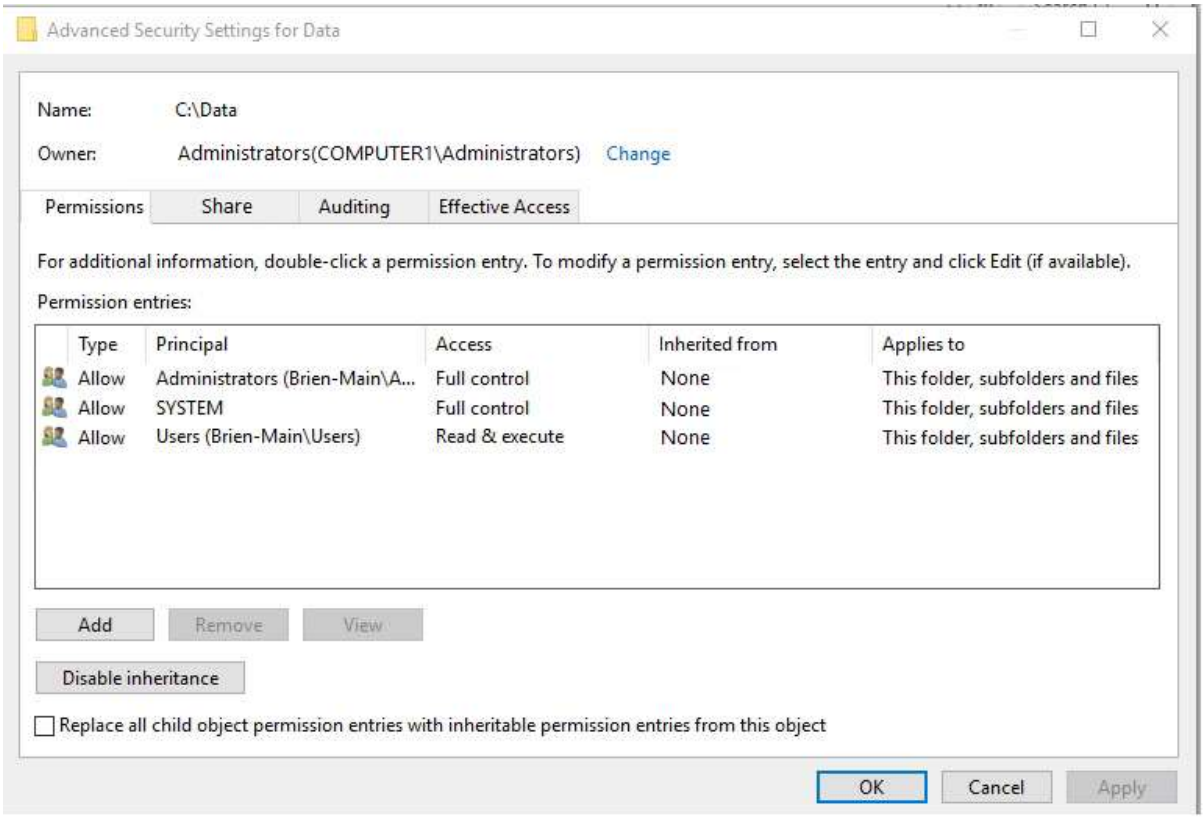

A. Turn off the Windows Welcome Experience
B. Turn off Windows Spotlight on Settings
C. Do not suggest third-party content in Windows spotlight
D. Turn off all Windows spotlight features

Correct Answer: D
Section: [none]
Explanation

Explanation/Reference:
References:
https://docs.microsoft.com/en-us/windows/configuration/windows-spotlight

QUESTION 6
HOTSPOT

You have a computer named Computer1 that runs Windows 10. Computer1 contains a folder named Data on drive C. The Advanced Security Settings for the Data folder are shown in the exhibit. (Click the **Exhibit** tab.)

You share C:\Data as shown in the following table.

Group or user	Share permission
Administrators	Change
Users	Read
User1	Change

User1 is a member of the Users group.

Administrators are assigned Full control NTFS permissions to C:\Data.

For each of the following statements, select Yes if the statement is true. Otherwise, select No.

NOTE: Each correct selection is worth one point.

Hot Area:

Correct Answer:

Section: [none]
Explanation

Explanation/Reference:

QUESTION 7
You have a file named Reg1.reg that contains the following content.

```
Windows Registry Editor Version 5.00

[HKEY_CLASSES_ROOT\Directory\Background\shell\Notepad]

[HKEY_CLASSES_ROOT\Directory\Background\shell\Notepad\command]
@="notepad.exe"
```

What is the effect of importing the file?

A. A key named command will be renamed as **notepad.exe**.
B. In a key named Notepad, the command value will be set to **@="notepad.exe"**.
C. In a key named command, the default value will be set to **notepad.exe**.

Correct Answer: B
Section: [none]
Explanation

Explanation/Reference:

QUESTION 8

You have a computer named Computer1 that runs Windows 10.

On Computer1, you create the local users shown in the following table.

Name	Member of
User1	Users
User2	Users, Guests
User3	Power Users, Guest
User4	Guests, Users, Administrators
User5	Users, Distributed COM Users

Which three user profiles will persist after each user signs out? Each correct answer presents part of the solution.

NOTE: Each correct selection is worth one point.

A. User1
B. User2
C. User3
D. User4
E. User5

Correct Answer: ADE
Section: [none]
Explanation

Explanation/Reference:

QUESTION 9
HOTSPOT

You have a computer that runs Windows 10. The computer is in a workgroup. The computer is used to provide visitors with access to the Internet.

You need to configure the computer to meet the following requirements:

- Always sign in automatically as User1.
- Start an application named App1.exe at sign-in.

What should you use to meet each requirement? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

QUESTION 10
You have 20 computers that run Windows 10. The computers are in a workgroup.

You need to create a local user named Admin1 on all the computers. Admin1 must be a member of the Remote Management Users group.

What should you do?

A. From Windows Configuration Designer, create a provisioning package, and then run the provisioning package on each computer.
B. Create a script that runs the **New-ADUser** cmdlet and the **Set-AdGroup** cmdlet.
C. Create a Group Policy object (GPO) that contains the Local User Group Policy preference.
D. Create a script that runs the **New-MsolUser** cmdlet and the **Add-ADComputerServiceAccount** cmdlet.

Correct Answer: C
Section: [none]
Explanation

Explanation/Reference:

QUESTION 11
You have several computers that run Windows 10. The computers are in a workgroup and have BitLocker Drive Encryption (BitLocker) enabled.

You join the computers to Microsoft Azure Active Directory (Azure AD).

You need to ensure that you can recover the BitLocker recovery key for the computers from Azure AD.

What should you do first?

A. Disable BitLocker.
B. Add a BitLocker key protector.
C. Suspend BitLocker.
D. Disable the TMP chip.

Correct Answer: B
Section: [none]
Explanation

QUESTION 12

HOTSPOT

Your network contains an Active Directory forest. The forest contains a root domain named contoso.com and a child domain named corp.contoso.com.

You have a computer named Computer1 that runs Windows 10. Computer1 is joined to the corp.contoso.com domain.

Computer1 contains a folder named Folder1. In the Security settings of Folder1, Everyone is assigned the Full control permissions.

On Computer1, you share Folder1 as Share1 and assign the Read permissions for Share1 to the Users group.

For each of the following statements, select Yes if the statement is true. Otherwise, select No.

NOTE: Each correct selection is worth one point.

Hot Area:

Correct Answer:

Section: [none]
Explanation

Explanation/Reference:

https://www.techrepublic.com/article/learn-the-basic-differences-between-share-and-ntfs-permissions/

QUESTION 13
HOTSPOT

You have a computer named Computer1 that runs Windows 10. Computer1 is in a workgroup.

Computer1 contains the folders shown in the following table.

Name	Volume	File system	Permission
Folder1	C	NTFS	Full control to Everyone
Folder2	C	NTFS	Full control to Everyone
Folder3	D	NTFS	Full control to Everyone

On Computer1, you create the users shown in the following table.

Name	Member of
User1	Users
User2	Backup Operators, Users
User3	Cryptographic Operators, Users
User4	Administrators, Users

User1 encrypts a file named File1.txt that is in a folder named C:\Folder1.

What is the effect of the configuration? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

Hot Area:

Correct Answer:

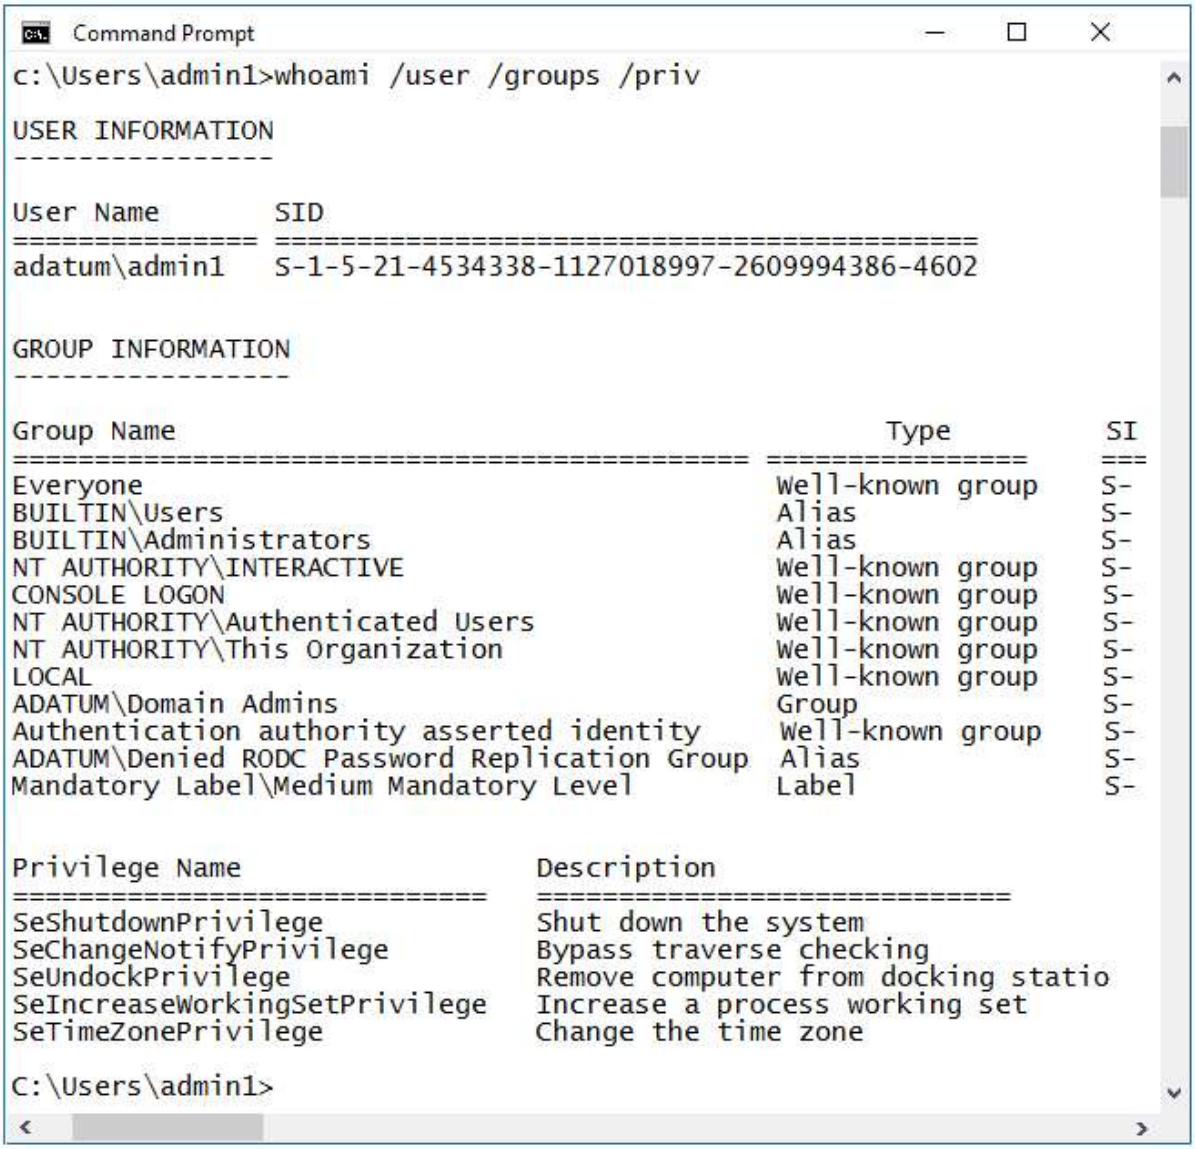

Section: [none]
Explanation

Explanation/Reference:

QUESTION 15
You have a computer named Computer1 that runs Windows 10.

You need to configure User Account Control (UAC) to prompt administrators for their credentials.

Which settings should you modify?

A. Administrators Properties in Local Users and Groups
B. User Account Control Settings in Control Panel
C. Security Options in Local Group Policy Editor
D. User Rights Assignment in Local Group Policy Editor

Correct Answer: C
Section: [none]
Explanation

Explanation/Reference:
References:

QUESTION 16
You have several computers that run Windows 10. The computers are in a workgroup.

You need to prevent users from using Microsoft Store apps on their computer.

What are two possible ways to achieve the goal? Each correct answer presents part of the solution.

NOTE: Each correct selection is worth one point.

A. From Security Settings in the local Group Policy, configure **Security Options**.
B. From Administrative Templates in the local Group Policy, configure the **Store** settings.
C. From Security Settings in the local Group Policy, configure **Software Restriction Policies**.
D. From Security Settings in the local Group Policy, configure **Application Control Policies**.

Correct Answer: BD
Section: [none]
Explanation

Explanation/Reference:

QUESTION 17
You have a computer named Computer1 that runs Windows 10.

You need to prevent standard users from changing the wireless network settings on Computer1. The solution must allow administrators to modify the wireless network settings.

What should you use?

A. Windows Configuration Designer
B. MSConfig
C. Local Group Policy Editor
D. an MMC console that has the Group Policy Object Editor snap-in

Correct Answer: C
Section: [none]
Explanation

Explanation/Reference:

QUESTION 18
HOTSPOT

You have three computers that run Windows 10 as shown in the following table.

Name	TPM version	Operating system
Computer1	*None*	Windows 10 Enterprise
Computer2	2.0	Windows 10 Pro
Computer3	1.2	Windows 10 Enterprise

All the computers have C and D volumes. The **Require additional authentication at startup Group Policy** settings is disabled on all the computers.

Which volumes can you encrypt by using BitLocker Drive Encryption (BitLocker)? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

QUESTION 19
Your network contains an Active Directory domain named contoso.com. The domain contains named Computer1 that runs Windows 10.

On Computer1, you create an NTFS folder and assign Full control permissions to Everyone.

You share the folder as Share1 and assign the permissions shown in the following table.

Name	Permission
User1	Full control
User2	Change

When accessing Share1, which two actions can be performed by User1 but not by User2? Each correct answer presents part of the solution.

NOTE: Each correct selection is worth one point.

A. Delete a file created by another user.
B. Set the permissions for a file.
C. Rename a file created by another user.
D. Take ownership of file.
E. Copy a file created by another user to a subfolder.

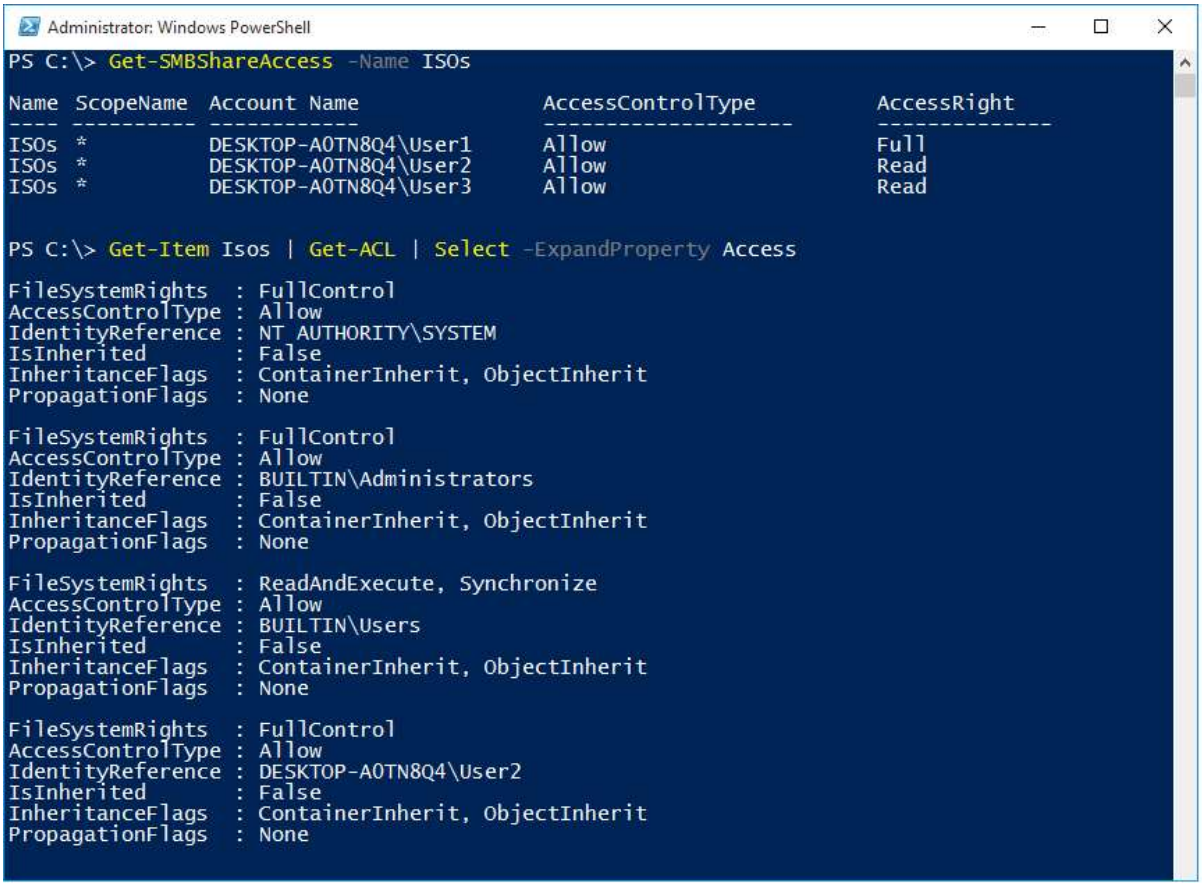

Correct Answer: BD
Section: [none]

QUESTION 21
Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution.

After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.

A user named User1 has a computer named Computer1 that runs Windows 10. Computer1 is joined to an Azure Active Directory (Azure AD) tenant named contoso.com. User1 joins Computer1 to contoso.com by using user1@contoso.com.

Computer1 contains a folder named Folder1. Folder1 is in drive C and is shared as Share1. Share1 has the permission shown in the following table.

Group	Share permission
Everyone	Full control
AzureAD\user1@contoso.com	Owner

A user named User2 has a computer named Computer2 that runs Windows 10. User2 joins Computer2 to contoso.com by using user2@contoso.com.

User2 attempts to access Share1 and receives the following error message: “The username or password is incorrect.”

You need to ensure that User2 can connect to Share1.

Solution: In Azure AD, you create a group named Group1 that contains User1 and User2. You grant Group1 Change access to Share1.

Does this meet the goal?

A. Yes
B. No

Correct Answer: B
Section: [none]
Explanation

Explanation/Reference:

QUESTION 25
HOTSPOT

Your network contains an Active Directory domain. The domain contains the users shown in the following table.

Name	Member of
User1	Group1
User2	Group1, Group2
User3	Group2

The domain contains a computer named Computer1 that runs Windows 10. Computer1 contains a folder named Folder1 that has the following permissions:

- User2: Deny Write
- Group1: Allow Read
- Group2: Allow Modify

Folder1 is shared as Share1$. Share1$ has the following configurations:

- Everyone: Allow Full control
- Access-based enumeration: Enabled

For each of the following statements, select Yes if the statement is true. Otherwise, select No.

NOTE: Each correct selection is worth one point.

Hot Area:

Statements	Yes	No
User1 can list files in \\Computer1\Share1$.	○	○
User2 can list files in \\Computer1\Share1$.	○	○
If User3 connects to \\Computer1 from File Explorer, Share1$ will be visible.	○	○

Correct Answer:

Statements	Yes	No
User1 can list files in \\Computer1\Share1$.	○	○
User2 can list files in \\Computer1\Share1$.	○	○
If User3 connects to \\Computer1 from File Explorer, Share1$ will be visible.	○	○

QUESTION 26
You are a network administrator at your company.

The company uses an application that checks for network connectivity to a server by sending a ping request to the IPv6 address of the server replies, the application loads.

A user cannot open the application.

You manually send the ping request from the computer of the user and the server does not reply. You send the ping request from your computer and the server replies.

You need to ensure that the ping request works from the user's computer.

Which Windows Defender firewall rule is a possible cause of the issue?

A. File and Printer Sharing (NB-Datagram-In)
B. File and Printer Sharing (Echo request ICMPv6-Out)
C. File and Printer Sharing (NB-Datagram-Out)
D. File and Printer Sharing (Echo Request ICMPv6-In)

Correct Answer: D

QUESTION 28
HOTSPOT

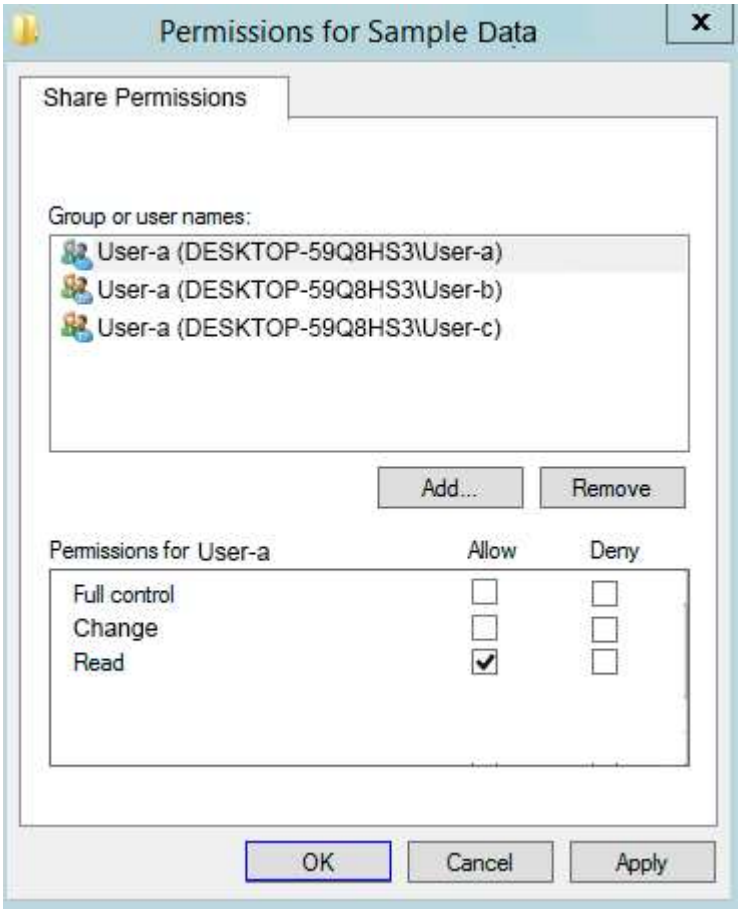

You have a computer named Computer5 that runs Windows 10 that is used to share documents in a workgroup.

You create three users named User-a, User-b, User-c. The users plan to access Computer5 from the network only.

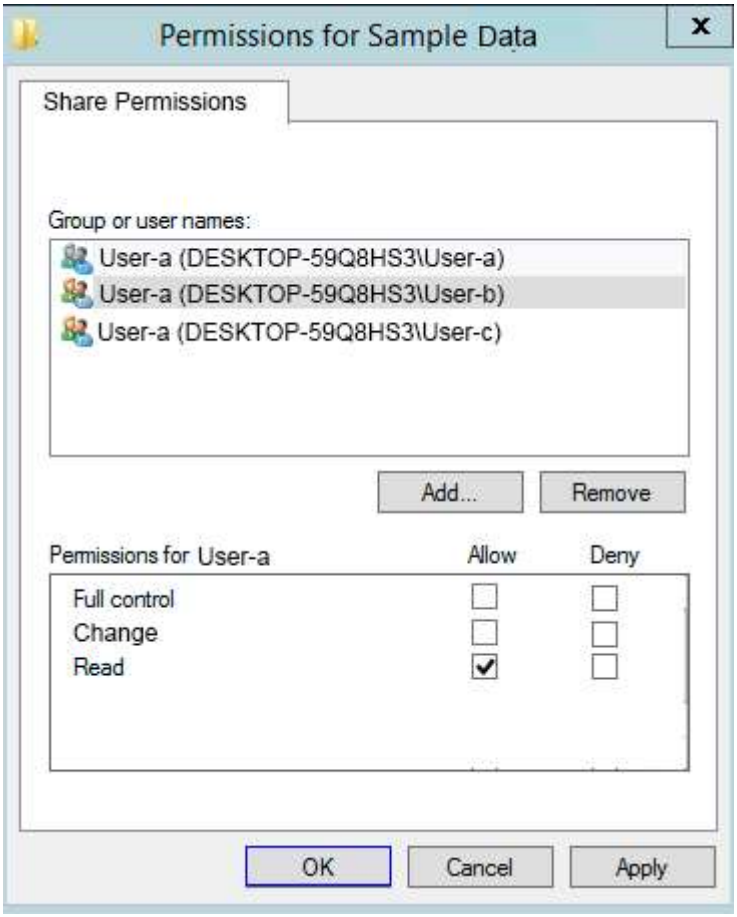

You have a folder named Data. The Advanced Security Settings for the Data folder are shown in the Security exhibit. (Click the **Security** Exhibit tab).

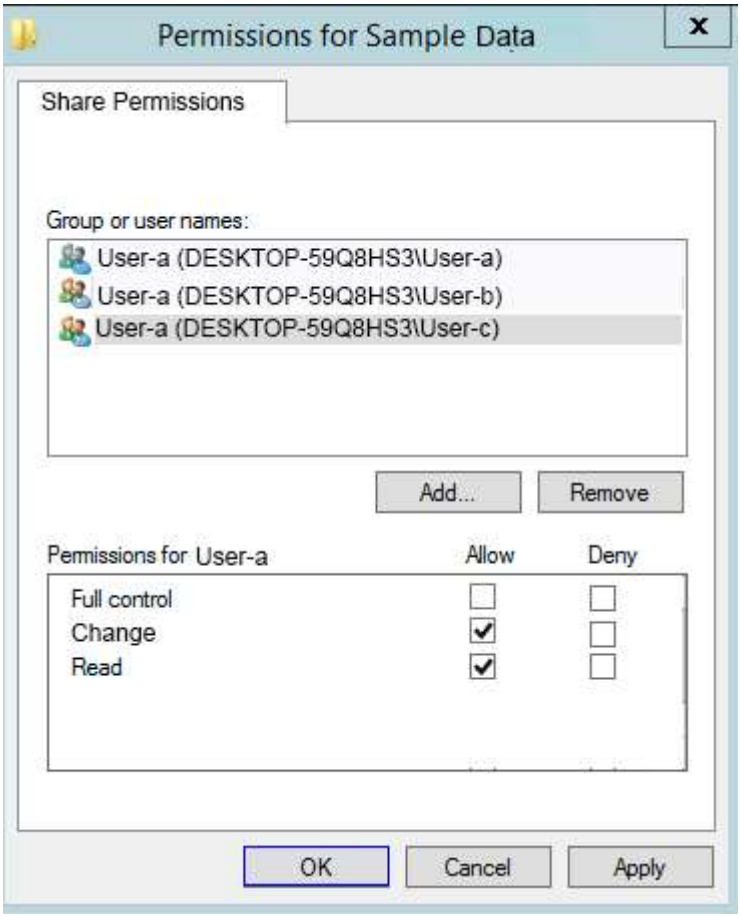

You share the Data folder. The permission for User-a are shown in the User-a exhibit (Click the **User-a** tab.)

The permissions for user-b are shown in the User-b exhibit. (Click the **User-b** tab.)

The permissions for user-c are shown in the User-c exhibit. (Click the **User-c** tab.)

For each of the following statements, select Yes if the statements is true. Otherwise, select No.

NOTE: Reach correct selection is worth one point.

Hot Area:

Statements	Yes	No
User-a can modify files in the Data share.	○	○
User-b can delete files in the Data share.	○	○
User-c can read files in the Data share.	○	○

Correct Answer:

Statements	Yes	No
User-a can modify files in the Data share.	○	○
User-b can delete files in the Data share.	○	○
User-c can read files in the Data share.	○	○

QUESTION 29
HOTSPOT

You have a computer that runs Windows 10 and contains the folders shown in the following table.

Name	Path
FolderA	C:\FolderA
FolderB	C:\FolderA\FolderB
FolderC	C:\FolderA\FolderB\FolderC

You create the groups shown in the following table.

Name	Members
Group1	User1, User2
Group2	User2, User3
Group3	User1, User3

On FolderA, you remove permission inheritance. To each folder, you assign the NTFS permissions shown in the following table.

Folder	Permission
FolderA	Modify to group1 Read to Group2
FolderB	Write to Group2
FolderC	Read to Group3

For each of the following statements, select Yes if the statement is true. Otherwise, select No.

NOTE: Each correct selection is worth one point.

Hot Area:

Statements	Yes	No
User1 can read and write all files in FolderC.	○	○
User2 can delete all files in FolderB.	○	○
User3 can delete all files in FolderC.	○	○

Correct Answer:

Statements	Yes	No
User1 can read and write all files in FolderC.	○	○
User2 can delete all files in FolderB.	○	○
User3 can delete all files in FolderC.	○	○

QUESTION 31
Your network contains an Active Directory domain. The domain contains computers that run Windows 10.

You need to provide a user with the ability to remotely create and modify shares on the computers. The solution must use the principle of least privilege.

To which group should you add the user?

A. Power Users
B. Remote Management Users
C. Administrators
D. Network Configuration Operators

Correct Answer: C
Section: [none]
Explanation

Explanation/Reference:

QUESTION 32
You have a computer named Computer1 that runs Windows 10. Computer1 belongs to a workgroup.

You run the following commands on Computer1.

```
New-LocalUser –Name User1 –NoPassword
Add-LocalGroupMember User –Member User1
```

What is the effect of the configurations?

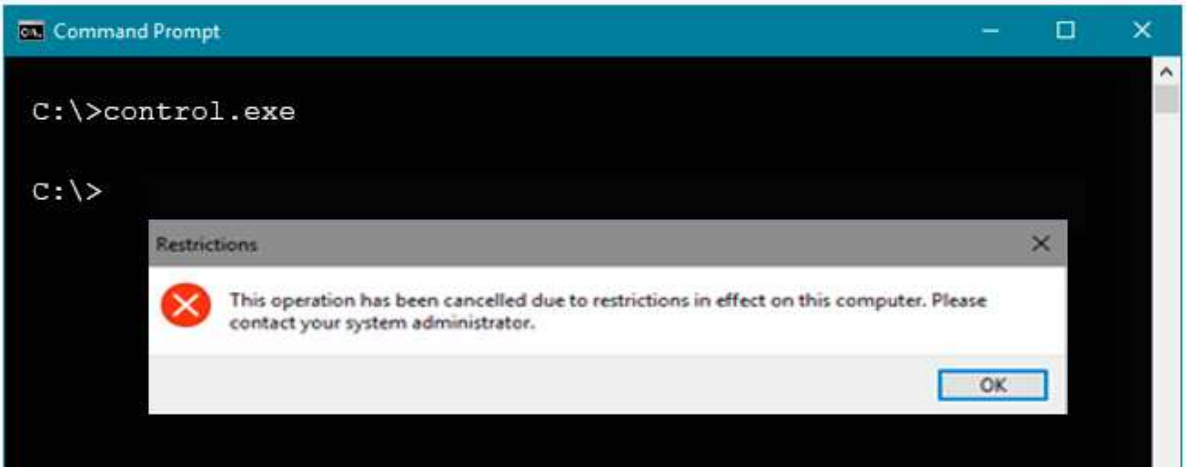

A. User1 is prevented from signing in until the user is assigned additional user rights.
B. User1 appears on the sign-in screen and can sign in without a password.
C. User1 is prevented from signing in until an administrator manually sets a password for the user.
D. User1 appears on the sign-in screen and must set a new password on the first sign-in attempts.

Testlet 1

Case Study

This is a case study. **Case studies are not timed separately. You can use as much exam times as you would like to complete each case.** However, there may be additional studies and sections on this exam. You must manage your time to ensure that you are able to complete all questions included on this exam in the time provided.

To answer the questions included in a case study, you will need to reference information that is provided in the case study. Case studies might contain exhibits and other resources that provide more information about the scenario that is described in the case study. Each question is independent of the other questions in this case study.

At the end of this case study, a review screen will appear. This screen allows you to review your answers and to make changes before you move to the next section of the exam. After you begin a new section, you cannot return to this section.

To start the case study
To display the first question in this case study, click the Next **button**. Use the buttons in the left pane to explore the content of the case study before you answer the questions. Clicking these buttons displays information such as business requirements, existing environment, and problem statements. When you are ready to answer a question, click the **Question** button to return to the question.

Overview

Existing Environment

Fabrikam, Inc. is a distribution company that has 500 employees and 100 contractors.

Active Directory

The network contains an Active Directory forest named fabrikam.com. The forest is synced to Microsoft Azure Active Directory (Azure AD). All the employees are assigned Microsoft 365 E3 licenses.

The domain contains a user account for an employee named User10.

Client Computers

All the employees have computers that run Windows 10 Enterprise. All the computers are installed without Volume License Keys. Windows 10 license keys are never issued.

All the employees register their computer to Azure AD when they first receive the computer.

User10 has a computer named Computer10.

All the contractors have their own computer that runs Windows 10. None of the computers are joined to Azure AD.

Operational Procedures

Fabrikam has the following operational procedures:

- Updates are deployed by using Windows Update for Business.
- When new contractors are hired, administrators must help the contactors configure the following settings on their computer:
  - User certificates
  - Browser security and proxy settings
  - Wireless network connection settings

Security policies

The following security policies are enforced on all the client computers in the domain:

- All the computers are encrypted by using BitLocker Drive Encryption (BitLocker). BitLocker recovery information is stored in Active Directory and Azure AD.
- The local Administrators group on each computer contains an enabled account named LocalAdmin.
- The LocalAdmin account is managed by using Local Administrator Password Solution (LAPS).

Problem Statements

Fabrikam identifies the following issues:

- Employees in the finance department use an application named Application1. Application1 frequently crashes due to a memory error. When Application1 crashes, an event is written to the application log and an administrator runs a script to delete the temporary files and restart the application.
- When employees attempt to connect to the network from their home computer, they often cannot establish a VPN connection because of misconfigured VPN settings.
- An employee has a computer named Computer11. Computer11 has a hardware failure that prevents the computer from connecting to the network.
- User10 reports that Computer10 is not activated.

Technical requirements

Fabrikam identifies the following technical requirements for managing the client computers:

- Provide employees with a configuration file to configure their VPN connection.
- Use the minimum amount of administrative effort to implement the technical requirements.
- Identify which employees' computers are noncompliant with the Windows Update baseline of the company.
- Ensure that the service desk uses Quick Assist to take remote control of an employee's desktop during support calls.
- Automate the configuration of the contractors' computers. The solution must provide a configuration file that the contractors can open from a Microsoft SharePoint site to apply the required configurations.

QUESTION 1
You need to recommend a solution to configure the employee VPN connections.

What should you include in the recommendation?

A. Remote Access Management Console
B. Group Policy Management Console (GPMC)
C. Connection Manager Administration Kit (CMAK)
D. Microsoft Intune

Correct Answer: D
Section: [none]
Explanation

Explanation/Reference:

Overview

Contoso, Ltd. is a consulting company that has a main office in Montreal and two branch offices in Seattle and New York.

Contoso has IT, human resources (HR), and finance departments.

Contoso recently opened a new branch office in San Diego. All the users in the San Diego office work from home.

Existing environment

Contoso uses Microsoft 365.

The on-premises network contains an Active Directory domain named contoso.com. The domain is synced to Microsoft Azure Active Directory (Azure AD).

All computers run Windows 10 Enterprise.

You have four computers named Computer1, Computer2, Computer3, and ComputerA. ComputerA is in a workgroup on an isolated network segment and runs the Long Term Servicing Channel version of Windows 10. ComputerA connects to a manufacturing system and is business critical. All the other computers are joined to the domain and run the Semi-Annual Channel version of Windows 10.

In the domain, you create four groups named Group1, Group2, Group3, and Group4.

Computer2 has the local Group Policy settings shown in the following table.

Policy	Security Setting
Access this computer from the network	Group1
Deny access to this computer from the network	Group2
Allow log on through Remote Desktop Services	Group3
Deny log on through Remote Desktop Services	Group4

The computers are updated by using Windows Update for Business.

The domain has the users shown in the following table.

Name	Member of
User1	Domain Admins, Domain Users
User2	Administrators, Domain Users
User3	Account Operators, Domain Users
User4	Domain Users
User5	Domain Users, Guests
User6	Group2, Group3, Domain Users

Computer1 has the local users shown in the following table.

Name	Member of
User11	Administrators
User12	Users
User13	Guests

Requirements

Planned Changes

Contoso plans to purchase computers preinstalled with Windows 10 Pro for all the San Diego office users.

Technical requirements

Contoso identifies the following technical requirements:

- The computers in the San Diego office must be upgraded automatically to Windows 10 Enterprise and must be joined to Azure AD the first time a user starts each new computer. End users must not be required to accept the End User License Agreement (EULA).
- Helpdesk users must be able to troubleshoot Group Policy object (GPO) processing on the Windows 10 computers. The helpdesk users must be able to identify which Group Policies are applied to the computers.
- Users in the HR department must be able to view the list of files in a folder named D:\Reports on Computer3.
- ComputerA must be configured to have an Encrypting File System (EFS) recovery agent.
- Quality update installations must be deferred as long as possible on ComputerA.
- Users in the IT department must use dynamic look on their primary device.
- User6 must be able to connect to Computer2 by using Remote Desktop.
- The principle of least privilege must be used whenever possible.
- Administrative effort must be minimized whenever possible.
- Assigned access must be configured on Computer1.

QUESTION 1
You need to meet the technical requirement for User6.

What should you do?

A. Add User6 to the Remote Desktop Users group in the domain.

B. Remove User6 from Group2 in the domain.
C. Add User6 to the Remote Desktop Users group on Computer2.
D. And User6 to the Administrators group on Computer2.

Correct Answer: B
Section: [none]
Explanation

Explanation/Reference:

QUESTION 2
You need to meet the technical requirement for the IT department users.

What should you do first?

A. Issue computer certificates
B. Distribute USB keys to the IT department users.
C. Enable screen saver and configure a timeout.
D. Turn on Bluetooth.

Correct Answer: D
Section: [none]
Explanation

Question Set 3

QUESTION 1
Your company has a wireless access point that uses WPA2-Enterprise.

You need to configure a computer to connect to the wireless access point.

What should you do first?

A. Create a provisioning package in Windows Configuration Designer.
B. Request a passphrase.
C. Request and install a certificate.
D. Create a Connection Manager Administration Kit (CMAK) package.

Correct Answer: B
Section: [none]
Explanation

Explanation/Reference:
References:
https://support.microsoft.com/en-za/help/17137/windows-setting-up-wireless-network

QUESTION 2
A user named User1 has a computer named Computer1 that runs Windows 10.

User1 connects to a Microsoft Azure virtual machine named VM1 by using Remote Desktop.

User1 creates a VPN connection to a partner organization.

When the VPN connection is established, User1 cannot connect to VM1. When User1 disconnects from the VPN, the user can connect to VM1.

You need to ensure that User1 can connect to VM1 while connected to the VPN.

What should you do?

A. From the proxy settings, add the IP address of VM1 to the bypass list to bypass the proxy.
B. From the properties of VPN1, clear the Use **default gateway on remote network** check box.
C. From the properties of the Remote Desktop connection to VM1, specify a Remote Desktop Gateway (RD Gateway).
D. From the properties of VPN1, configure a static default gateway address.

Correct Answer: B
Section: [none]
Explanation

Explanation/Reference:
References:
https://www.stevejenkins.com/blog/2010/01/using-the-local-default-gateway-with-a-windows-vpn-connection/

QUESTION 3
Your network contains an Active Directory domain. The domain contains a user named Admin1. All computers run Windows 10.

You enable Windows PowerShell remoting on the computers.

You need to ensure that Admin1 can establish remote PowerShell connections to the computers. The solution

must use the principle of least privilege.

To which group should you add Admin1?

A. Access Control Assistance Operators
B. Power Users
C. Remote Desktop Users
D. Remote Management Users

Correct Answer: D
Section: [none]
Explanation

Explanation/Reference:
References:
https://4sysops.com/wiki/enable-powershell-remoting/

QUESTION 4
You have 200 computers that run Windows 10 and are joined to an Active Directory domain.

You need to enable Windows Remote Management (WinRM) on all the computers by using Group Policy.

Which three actions should you perform? Each correct answer presents part of the solution.

NOTE: Each correct selection is worth one point.

A. Set the Startup Type of the Windows Remote Management (WS-Management) service to **Automatic**.
B. Enable the Windows Firewall: Allow inbound remote administration exception setting.
C. Enable the Allow remote server management through WinRM setting.
D. Enable the Windows Firewall: Allow inbound Remote Desktop exceptions setting.
E. Enable the Allow Remote Shell access setting.
F. Set the Startup Type of the Remote Registry service to **Automatic**.

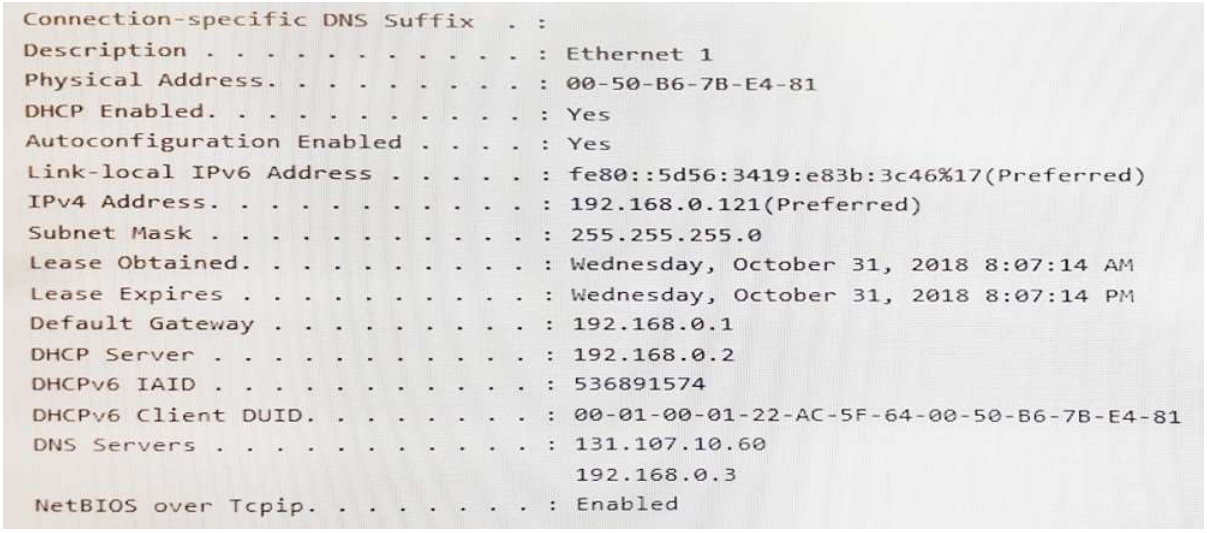

Correct Answer: ACD
Section: [none]
Explanation

Explanation/Reference:
References:
http://www.mustbegeek.com/how-to-enable-winrm-via-group-policy/

QUESTION 5
A user has a computer that runs Windows 10.

When the user connects the computer to the corporate network, the user cannot access the internal corporate servers. The user can access servers on the Internet.

You run the ipconfig command and receive the following output.

You send a ping request and successfully ping the default gateway, the DNS servers, and the DHCP server.

Which configuration on the computer causes the issue?

A. the DNS servers
B. the IPv4 address
C. the subnet mask
D. the default gateway address

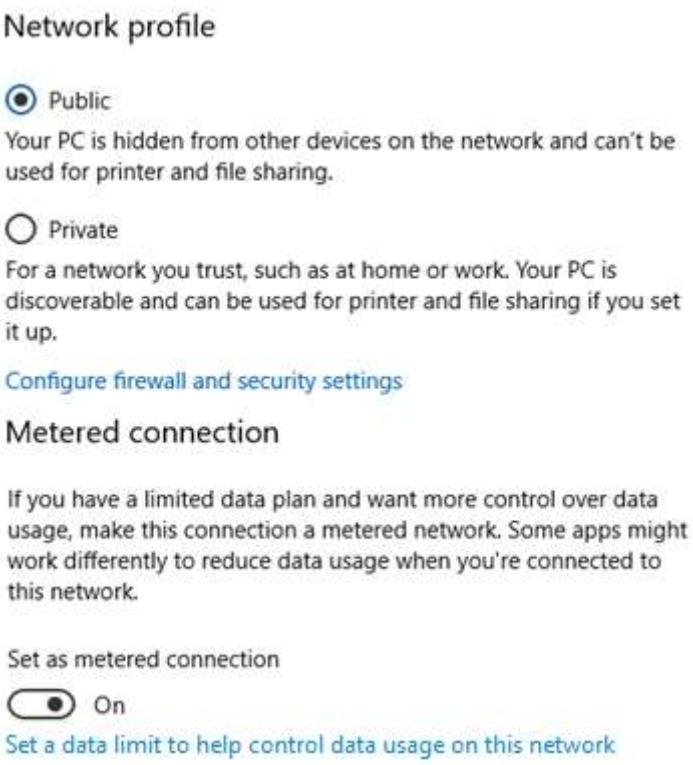

Correct Answer: A
Section: [none]
Explanation

Explanation/Reference:

QUESTION 6
HOTSPOT

You have a computer that runs Windows 10.

From the Settings app, you view the connection properties shown in the following exhibit.

Use the drop-down menus to select the answer choice that completes each statement based on the information presented in the graphic.

NOTE: Each correct selection is worth one point.

Hot Area:

Correct Answer:

Section: [none]
Explanation

Explanation/Reference:

QUESTION 7
You have 15 computers that run Windows 10. Each computer has two network interfaces named Interface1 and Interface2.

You need to ensure that network traffic uses Interface1, unless Interface1 is unavailable.

What should you do?

A. Run the **Set-NetIPInterface –InterfaceAlias Interface1 –InterfaceMetric 1** command.
B. Run the **Set-NetAdapterBinding –Name Interface2 –Enabled $true –ComponentID ms_tcpip –ThrottleLimit 0** command.
C. Set a static IP address on Interface 1.
D. From Network Connections in Control Pane, modify the Provider Order.

Correct Answer: A
Section: [none]

Explanation

Explanation/Reference:

QUESTION 8
Your network contains an Active Directory domain. The domain contains 10 computers that run Windows 10. Users in the finance department use the computers.

You have a computer named Computer1 that runs Windows 10.

From Computer1, you plan to run a script that executes Windows PowerShell commands on the finance department computers.

You need to ensure that you can run the PowerShell commands on the finance department from Computer1.

What should you do on the finance department computers?

A. From the local Group Policy, enable the **Allow Remote Shell Access** setting.
B. From the local Group Policy, enable the **Turn on Script Execution** setting.
C. From the Windows PowerShell, run the **Enable-MMAgent** cmdlet.
D. From the Windows PowerShell, run the **Enable-PSRemoting** cmdlet.

Correct Answer: D
Section: [none]
Explanation

Explanation/Reference:
References:
https://docs.microsoft.com/en-us/powershell/module/microsoft.powershell.core/enable-psremoting?view=powershell-6

QUESTION 9
You have an Azure Active Directory (Azure AD) tenant that contains a user named user1@contoso.com.

You have a computer named Computer1 that runs Windows 10.

You join Computer1 to Azure AD. You enable Remote Desktop on Computer1.

User1@contoso.com attempts to connect to Computer1 by using Remote Desktop and receives the following error message: “The logon attempt failed.”

You need to ensure that the user can connect to Computer1 by using Remote Desktop.

What should you do first?

A. In Azure AD, assign user1@contoso.com the Cloud device administrator role.
B. From the local Group Policy, modify the Allow log on through Remote Desktop Services user right.
C. In Azure AD, assign user1@contoso.com the Security administrator role.
D. On Computer1, create a local user and add the new user to the Remote Desktop Users group.

Correct Answer: B
Section: [none]

Explanation

Explanation/Reference:
References:
https://docs.microsoft.com/en-us/windows/security/threat-protection/security-policy-settings/allow-log-on-through-remote-desktop-services

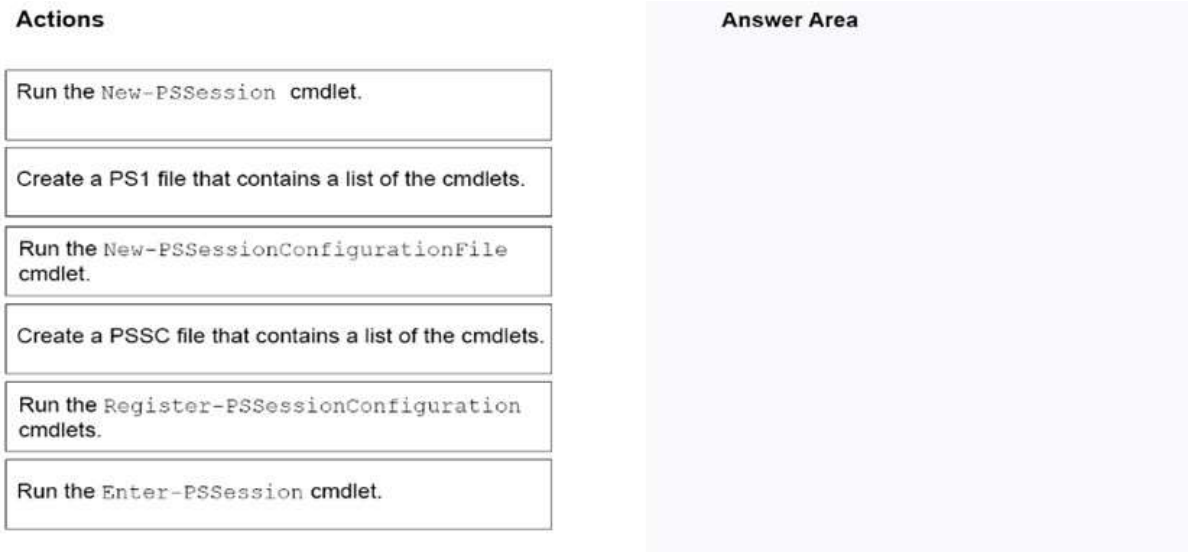

QUESTION 10
DRAG DROP

You enable Windows PowerShell remoting on a computer that runs Windows 10.

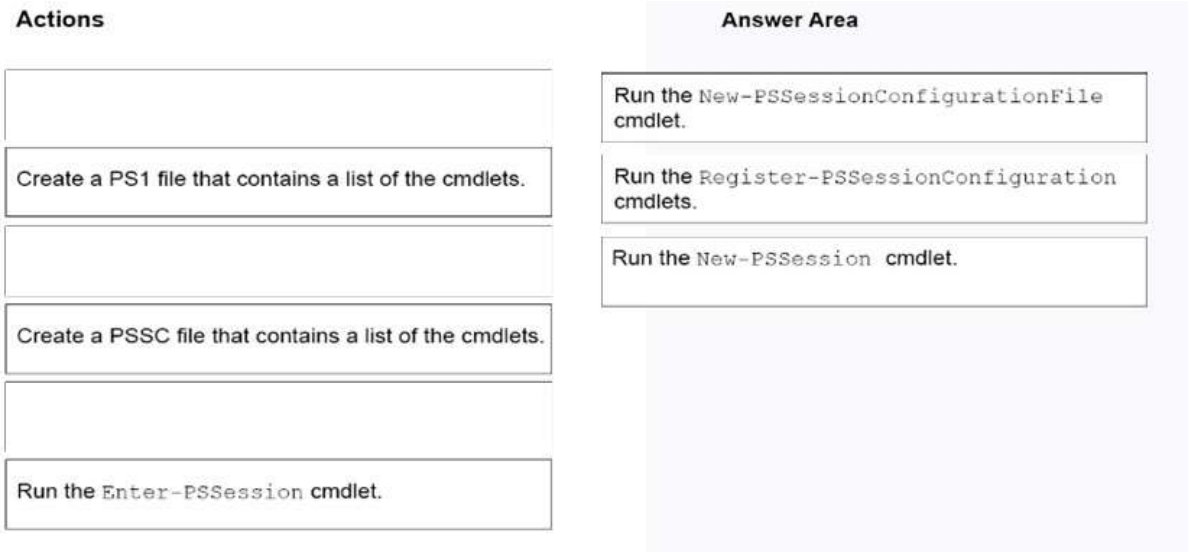

You need to limit which PowerShell cmdlets can be used in a remote session.

Which three actions should you perform in sequence? To answer, move the appropriate actions from the list of actions to the answer area and arrange them in the correct order.

Select and Place:

Correct Answer:

Section: [none]

Explanation

Testlet 1

Case Study

This is a case study. **Case studies are not timed separately. You can use as much exam times as you would like to complete each case.** However, there may be additional studies and sections on this exam. You must manage your time to ensure that you are able to complete all questions included on this exam in the time provided.

To answer the questions included in a case study, you will need to reference information that is provided in the case study. Case studies might contain exhibits and other resources that provide more information about the scenario that is described in the case study. Each question is independent of the other questions in this case study.

At the end of this case study, a review screen will appear. This screen allows you to review your answers and to make changes before you move to the next section of the exam. After you begin a new section, you cannot return to this section.

To start the case study
To display the first question in this case study, click the Next **button**. Use the buttons in the left pane to explore the content of the case study before you answer the questions. Clicking these buttons displays information such as business requirements, existing environment, and problem statements. When you are ready to answer a question, click the **Question** button to return to the question.

Overview

Existing Environment

Fabrikam, Inc. is a distribution company that has 500 employees and 100 contractors.

Active Directory

The network contains an Active Directory forest named fabrikam.com. The forest is synced to Microsoft Azure Active Directory (Azure AD). All the employees are assigned Microsoft 365 E3 licenses.

The domain contains a user account for an employee named User10.

Client Computers

All the employees have computers that run Windows 10 Enterprise. All the computers are installed without Volume License Keys. Windows 10 license keys are never issued.

All the employees register their computer to Azure AD when they first receive the computer.

User10 has a computer named Computer10.

All the contractors have their own computer that runs Windows 10. None of the computers are joined to Azure AD.

Operational Procedures

Fabrikam has the following operational procedures:

- Updates are deployed by using Windows Update for Business.
- When new contractors are hired, administrators must help the contactors configure the following settings on their computer:
  - User certificates
  - Browser security and proxy settings
  - Wireless network connection settings

Security policies

The following security policies are enforced on all the client computers in the domain:

- All the computers are encrypted by using BitLocker Drive Encryption (BitLocker). BitLocker recovery information is stored in Active Directory and Azure AD.
- The local Administrators group on each computer contains an enabled account named LocalAdmin.
- The LocalAdmin account is managed by using Local Administrator Password Solution (LAPS).

Problem Statements

Fabrikam identifies the following issues:

- Employees in the finance department use an application named Application1. Application1 frequently crashes due to a memory error. When Application1 crashes, an event is written to the application log and an administrator runs a script to delete the temporary files and restart the application.
- When employees attempt to connect to the network from their home computer, they often cannot establish a VPN connection because of misconfigured VPN settings.
- An employee has a computer named Computer11. Computer11 has a hardware failure that prevents the computer from connecting to the network.
- User10 reports that Computer10 is not activated.

Technical requirements

Fabrikam identifies the following technical requirements for managing the client computers:

Provide employees with a configuration file to configure their VPN connection.

- Use the minimum amount of administrative effort to implement the technical requirements.
- Identify which employees' computers are noncompliant with the Windows Update baseline of the company.
- Ensure that the service desk uses Quick Assist to take remote control of an employee's desktop during support calls.
- Automate the configuration of the contractors' computers. The solution must provide a configuration file that the contractors can open from a Microsoft SharePoint site to apply the required configurations.

QUESTION 1
You need to recommend a solution to monitor update deployments.

What should you include in the recommendation?

A. Windows Server Update (WSUS)
B. the Update Management solution in Azure Automation
C. the Update Compliance solution in Azure Log Analytics
D. the Azure Security Center

Correct Answer: C
Section: [none]
Explanation

Explanation/Reference:
References:
https://docs.microsoft.com/en-us/windows/deployment/update/update-compliance-monitor

Testlet 2

Case Study

This is a case study. **Case studies are not timed separately. You can use as much exam times as you would like to complete each case.** However, there may be additional studies and sections on this exam. You must manage your time to ensure that you are able to complete all questions included on this exam in the time provided.

To answer the questions included in a case study, you will need to reference information that is provided in the case study. Case studies might contain exhibits and other resources that provide more information about the scenario that is described in the case study. Each question is independent of the other questions in this case study.

At the end of this case study, a review screen will appear. This screen allows you to review your answers and to make changes before you move to the next section of the exam. After you begin a new section, you cannot return to this section.

To start the case study
To display the first question in this case study, click the Next **button**. Use the buttons in the left pane to explore the content of the case study before you answer the questions. Clicking these buttons displays information such as business requirements, existing environment, and problem statements. Overview

Contoso, Ltd. is a consulting company that has a main office in Montreal and two branch offices in Seattle and New York.

Contoso has IT, human resources (HR), and finance departments.

Contoso recently opened a new branch office in San Diego. All the users in the San Diego office work from home.

Existing environment

Contoso uses Microsoft 365.

The on-premises network contains an Active Directory domain named contoso.com. The domain is synced to Microsoft Azure Active Directory (Azure AD).

All computers run Windows 10 Enterprise.

You have four computers named Computer1, Computer2, Computer3, and ComputerA. ComputerA is in a workgroup on an isolated network segment and runs the Long Term Servicing Channel version of Windows 10. ComputerA connects to a manufacturing system and is business critical. All the other computers are joined to the domain and run the Semi-Annual Channel version of Windows 10.

In the domain, you create four groups named Group1, Group2, Group3, and Group4.

Computer2 has the local Group Policy settings shown in the following table.

Policy	Security Setting
Access this computer from the network	Group1
Deny access to this computer from the network	Group2
Allow log on through Remote Desktop Services	Group3
Deny log on through Remote Desktop Services	Group4

The computers are updated by using Windows Update for Business.

The domain has the users shown in the following table.

Name	Member of
User1	Domain Admins, Domain Users
User2	Administrators, Domain Users
User3	Account Operators, Domain Users
User4	Domain Users
User5	Domain Users, Guests
User6	Group2, Group3, Domain Users

Computer1 has the local users shown in the following table.

Name	Member of
User11	Administrators
User12	Users
User13	Guests

Requirements

Planned Changes

Contoso plans to purchase computers preinstalled with Windows 10 Pro for all the San Diego office users.

Technical requirements

Contoso identifies the following technical requirements:

- The computers in the San Diego office must be upgraded automatically to Windows 10 Enterprise and must be joined to Azure AD the first time a user starts each new computer. End users must not be required to accept the End User License Agreement (EULA).
- Helpdesk users must be able to troubleshoot Group Policy object (GPO) processing on the Windows 10 computers. The helpdesk users must be able to identify which Group Policies are applied to the computers.
- Users in the HR department must be able to view the list of files in a folder named D:\Reports on Computer3.
- ComputerA must be configured to have an Encrypting File System (EFS) recovery agent.
- Quality update installations must be deferred as long as possible on ComputerA.
- Users in the IT department must use dynamic look on their primary device.
- User6 must be able to connect to Computer2 by using Remote Desktop.
- The principle of least privilege must be used whenever possible.
- Administrative effort must be minimized whenever possible.
- Assigned access must be configured on Computer1.

QUESTION 1
You need to meet the quality update requirement for ComputerA.

For how long should you defer the updates?

A. 14 days

B. 10 years
C. 5 years
D. 180 days
E. 30 days

Correct Answer: B
Section: [none]
Explanation

Explanation/Reference:
References:
https://docs.microsoft.com/en-us/windows/deployment/update/waas-overview

Question Set 3

QUESTION 1
Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution.

After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.

You have a computer named Computer1 that runs Windows 10.

You test Windows updates on Computer1 before you make the updates available to other users at your company.

You install a quality update that conflicts with a customer device driver.

You need to remove the update from Computer1.

Solution: From an elevated command prompt, you run the **wusa.exe** command and specify the **/uninstall** parameter.

Does this meet the goal?

A. Yes
B. No

Correct Answer: A
Section: [none]
Explanation

Explanation/Reference:
References:
https://support.microsoft.com/en-us/help/934307/description-of-the-windows-update-standalone-installer-in-windows

QUESTION 2
Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution.

After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.

You have a computer named Computer1 that runs Windows 10.

You test Windows updates on Computer1 before you make the updates available to other users at your company.

You install a quality update that conflicts with a customer device driver.

You need to remove the update from Computer1.

Solution: From System Restore, you revert the system state to a restore point that was created before the update was installed.

Does this meet the goal?

A. Yes

B. No

Correct Answer: B
Section: [none]
Explanation

Explanation/Reference:
References:
https://support.microsoft.com/en-us/help/934307/description-of-the-windows-update-standalone-installer-in-windows

QUESTION 3
You have 100 computers that run Windows 10. The computers are in a workgroup.

The computers have a low-bandwidth metered Internet connection.

You need to reduce the amount of Internet bandwidth consumed to download updates.

What should you configure?

A. BranchCache in hosted mode
B. BranchCache in distributed cache mode
C. Delivery Optimization
D. Background intelligent Transfer Service (BITS)

Correct Answer: C
Section: [none]
Explanation

Explanation/Reference:
References:
https://support.microsoft.com/en-us/help/4468254/windows-update-delivery-optimization-faq

QUESTION 4
You have 20 computers that run Windows 10.

You configure all the computers to forward all the events from all the logs to a computer named Computer1 that runs Windows 10.

When you sign in to Computer1, you cannot see any security events from other computers. You can see all the other forwarded events from the other computers.

You need to ensure that the security events are forwarded to Computer1.

What should you do?

A. On each computer, run **wecutil ac /q**.
B. On each computer, add the NETWORK SERVICE account to the Event Log Readers group.
C. On each computer, run **winrm qc –q**.
D. On Computer1, add the account of Computer1 to the Event Log Readers group.

Correct Answer: D
Section: [none]
Explanation

Explanation/Reference:
References:

https://docs.microsoft.com/en-us/windows/security/threat-protection/use-windows-event-forwarding-to-assist-in-intrusion-detection

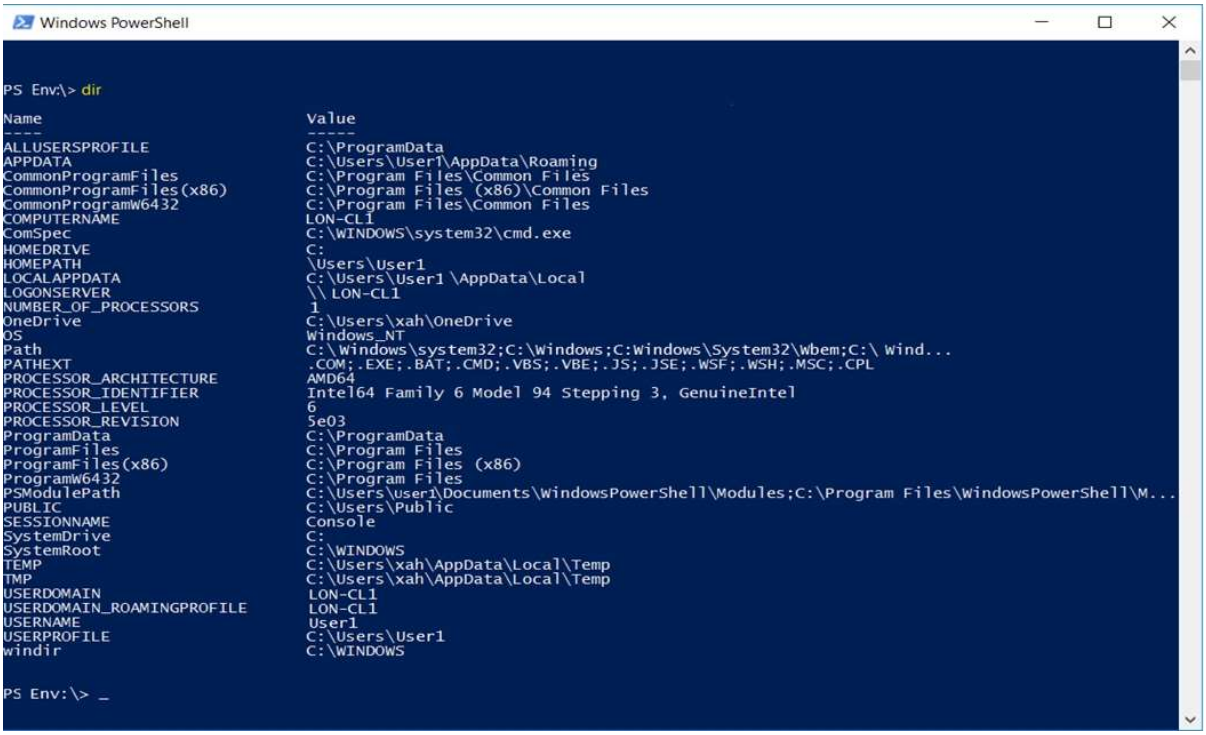

QUESTION 5
HOTSPOT

You have a computer named Computer1 that runs Windows 10 and contains the following files:

- C:\Folder1\File1.bat
- C:\Folder1\File1.exe
- C:\Folder1\File1.cmd

A user named User1 is assigned Read & execute to all the files.

Computer1 is configured as shown in the exhibit.

Use the drop-down menus to select the answer choice that completes each statement based on the information presented in the graphic.

NOTE: Each correct selection is worth one point.

Hot Area:

Correct Answer:

Section: [none]

QUESTION 6
You have a computer that runs Windows 10.

You discover that Windows updates are failing to install on the computer.

You need to generate a log file that contains detailed information about the failures.

Which cmdlet should you run?

A. **Get–LogProperties**
B. **Get–WindowsErrorReporting**
C. **Get–WindowsUpdateLog**
D. **Get–WinEvent**

Correct Answer: C
Section: [none]
Explanation

Explanation/Reference:
References:
https://docs.microsoft.com/en-us/powershell/module/windowsupdate/get-windowsupdatelog?view=win10-ps

QUESTION 7
HOTSPOT

Your network contains an Active Directory domain named contoso.com. The domain contains a server named Server1 that runs Windows Server 2016 and a computer named Computer1 that runs Windows 10.

Server1 contains a share named Backup. All users can read and write data in Backup.

On Monday at 13:00, you configure Backup and Restore (Windows 7) on Computer1 to use the following settings:

- Backup Destination:\\Server1\Backup
- What do you want to back up?:Local Disk (D:), Include a system image of drives: System Reserved, (C:)
- Schedule: Daily at 23:00

You need to identify how many backups will be available on Thursday at 17:00.

What should you identify? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

QUESTION 13
You have a computer named LON-CL1.Adatum.com that runs Windows 10.

From Event Viewer, you create a custom view named View1 that has the following filter:

- User: User1
- Logged: Any time
- Event logs: System
- Computer: LON-CL1
- Event IDs: 10000 – 11000
- Event level: Error, Verbose

You open **Event Viewer** and discover the event shown in the exhibit. (Click the **Exhibit** tab.)

The event does not appear in View1.

You need to ensure that the event appears in View1.

What should you do?

A. Add a Task Category setting to the filter.
B. Add the computer account to the Event Log Readers group.
C. Create an event subscription.

D. Modify the Computer setting in the filter.

Correct Answer: A
Section: [none]

QUESTION 17
HOTSPOT

You have a computer named Computer1 that runs Windows 10.

Computer1 has the local users shown in the following table.

Name	Member of
User1	Administrators
User2	Event Log readers
User3	Device Owners
User4	Power Users
User5	Users

Which users can analyze the event logs on Computer1? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

Hot Area:

Answer Area

Users who can analyze security event logs:

- User1 only
- User1 and User2 only
- User1 and User2, and User3 only
- User1, User2, User3, and User4 only
- User1, User2, User3, User4, and User5

Users who can analyze system event logs:

- User1 only
- User1 and User2 only
- User1 and User2, and User3 only
- User1, User2, User3, and User4 only
- User1, User2, User3, User4, and User5

Correct Answer:

Answer Area

Users who can analyze security event logs:

- User1 only
- **User1 and User2 only**
- User1 and User2, and User3 only
- User1, User2, User3, and User4 only
- User1, User2, User3, User4, and User5

Users who can analyze system event logs:

- User1 only
- User1 and User2 only
- User1 and User2, and User3 only
- User1, User2, User3, and User4 only
- **User1, User2, User3, User4, and User5**

QUESTION 18
Your company has a main office and a branch office. The offices connect to each other by using a WAN link. Access to the Internet is provided through the main office.

The branch office contains 25 computers that run Windows 10. The computers contain small hard drives that have very little free disk space.

You need to prevent the computers in the branch office from downloading updates from peers on the network.

What should you do?

A. From the Settings app, modify the Delivery Optimizations settings.
B. Configure the network connections as metered connections.
C. Configure the computers to use BranchCache in hosted cache mode.
D. Configure the updates to use the Semi-Annual Channel (Targeted) channel.

Correct Answer: C
Section: [none]
Explanation

Explanation/Reference:
References:
https://docs.microsoft.com/en-us/windows/deployment/update/waas-branchcache
