HOW IT WORKS

So here we trade the Spikes, we don't trade against them which is a less risk.

On the charts below we have 3 lines.

Red, **Black** and **Green**. **Red** means **sell**, **Green** means **buy** and the **Black** line is your signal line.

When trading **Crash 500** & **Crash 1000**.

(Sell Condition)

When the **Black** line touches the **Red** line that means there will be a spike going down so you have to **sell**. Bare in mind that the Spikes are always going down on Crash 500/1000.

When trading **Boom 500** & **Boom 1000**.

(**Buy Condition**)

When the **Black** line touches the **Green** line that means there will be a spike going up so you have to **buy**. Bare in mind that the Spikes are always going up on Boom 500/1000.

Here are the settings
