Important One-liner for IBPS AFO & NABARD By agriguru

- Cytokinin promotes cell division in plant roots and shoots.
- A mist chamber is used for hardening plants after in vitro culture.
- Gibberellin promotes stem elongation and seed germination.
- Rambutan is a popular garden fruit tree.
- A fernery is a specialized garden for ferns.
- Mango and Orange are examples of facultative apomicts.
- Cuniculture is the practice of breeding and raising domestic rabbits.
- Penjing is an ancient Chinese art similar to Bonsai for growing miniature trees.
- Saikei is the art of creating miniature landscapes.
- Bonsai is the art of growing trees or woody plants shaped as trees in containers.
- Murashige & Skoog medium is the most commonly used medium in plant tissue culture.

Agriguru has been providing IBPS AFO notes since 2014, helping over 1,000 students succeed in IBPS AFO and other agricultural exams. Initially, we offered classes via Zoom and then introduced online, module-wise notes. Now, we've taken a step further by offering printed books titled "Instant IBPS AFO Book." Additionally, we conduct weekly classes and provide online mock tests for IBPS AFO mains preparation.

- Regular Updates
- Concise Short Notes
- Printed books

OUR SPECIALITY

- Subject-Wise Analysis
- Topic-Wise Notes
- Strategy for preparation
- Subject wise mocktest
- Daily Agriculture current affairs

Important One-liner for IBPS AFO & NABARD By agriguru

- Stratification is the process of subjecting seeds to cold and moist conditions to promote germination.
- Vanilla is the second most expensive spice after saffron.
- The Netherlands is the world's leading exporter of flowers.
- 13% moisture is ideal for certified seeds of rice.
- Slugs and snails are gastropod pests of orchid and anthurium.
- Bitter gourd and Coccinia are cucurbits used for the treatment of diabetes.
- Concentrates and roughages are the main components of cattle feedstuffs.
- Greenhouses and mist chambers are structures used to harden plants in a nursery.
- The optimum spacing for wheat is 22.5 cm (line to line).
- Silver iodide and dry ice are substances used for artificial rain simulation.
- White fly and leaf hopper are the vectors of yellow vein mosaic disease of okra.

Important One-liner for IBPS AFO & NABARD By agriguru

- Mass flow and diffusion are mechanisms that control gas exchange between the soil and atmosphere.
- Brinjal and snake gourd are vegetables of Indian origin.
- (A x B) x (C x D) are double cross hybrids.
- The Seeds Act was enacted by the Parliament of India in 1966.
- Mechanical measures are adopted only if erosion exceeds 2%.
- Late blight (Phytophthora infestans) is the most dangerous disease of potato.
- National Seed Corporation (NSC) was registered in 1963.
- The nucleus was discovered by Robert Brown in 1831.
- Pattambi local is a variety of horse gram.
- Preethi is a variety of bitter gourd.
- World Food Day is observed on 16th October 1945.
- Half of the interquartile range is called the quartile deviation.
- One bale of cotton is equal to 170 kg.

Important One-liner for IBPS AFO & NABARD By agriguru

- The first hybrid variety of sorghum was CSH-1, released in 1965.
- Fourteen commercial banks were nationalized on 19th July 1969.
- The third oldest bank in India, the Bank of Calcutta, was established in 1806.
- The first enzyme discovered by yeast was zymase in 1897 (Eduard Buchner).
- HB-1 was the first hybrid variety of sorghum released in 1965.
- The first intergeneric hybrid was Raphanobrassica (radish x cabbage).
- 2, 4-D belongs to the chemical group of chloro phenoxy compounds.
- 2, 4-D, Simazine, Atrazine, and Fluchloralin are selective herbicides.
- 2, 4-D controls only broadleaf weeds.
- Fungicides like PMA and Atrazine at low concentrations act as stomatal closing antitranspirants.
- -40°C is equal to -40°F.
- 70s type ribosome is found in mitochondria and chloroplasts.

Important One-liner for IBPS AFO & NABARD By agriguru

- 75% of rainfall is received during the southwest monsoon period (June-Sept).
- 80% of phosphorus in bajra grains is stored in the form of phytate.
- A + B horizon is called solum.
- E. coli (Agrobacterium tumefaciens) is a bacterium used in genetic engineering.
- A belt of trees and/or shrubs for shelter from wind, sun, and snow is called shelterbelts.
- A biochemical process or reaction taking place in a test tube is called in vitro.
- Cabbage is a biological indicator plant of molybdenum deficiency.
- Agronomy is the branch of agricultural science dealing with soil, water, and crop management.
- A building with glass walls and a roof for plant cultivation under controlled conditions is known as a greenhouse.
- Black rot is a cabbage disease more severe in acidic soils.
- A central feature of a garden provides a focal point.

Important One-liner for IBPS AFO & NABARD By agriguru

- The part of the sun's energy reflected back to space by the earth is known as albedo.
- TIBA is a chemical effective in controlling alternate bearing in mango.
- ABA is a chemical inducing abscission in plants.
- 2,4,5-T induces parthenocarpy in fruits. • 2,3,5-triphenyl tetrazolium chloride is used to test seed viability.
- Cover crops are close-growing crops grown primarily to improve and protect soil from erosion.
- Integrated Rural Development Programme (IRDP) aims to alleviate mass poverty in rural India.
- Male sterility is when pollen is absent or non-functional in flowering plants.
- Weather refers to the atmospheric conditions at a given place and time.
- Carnation is a cool-season flower crop.
- Breadfruit, blackberry, rose, and fig are propagated by root cutting.
- Rice suits acid soil.

Important One-liner for IBPS AFO & NABARD By agriguru

- Paddy can be cultivated in acid-saline soil.
- Cash crops are grown for direct sale rather than livestock feed or personal use.
- Relay or overlapping cropping involves planting a succeeding crop before harvesting the standing crop.
- Ash gourd is used in confectionery.
- Shelling percentage of pea is 49%.
- Embryo culture involves culturing isolated mature or immature embryos.
- Adoption means continuing full use of an innovation.
- Sweet potato is deep-rooted.
- Result demonstration compares old and new technologies.
- Evaporation is the process where liquid water turns to vapor.
- Minamata disease is caused by methyl mercury (MeHg) poisoning in Japan.
- Tungro is a viral disease in rice.
- Damping off causes the collapse and death of seedlings.

Important One-liner for IBPS AFO & NABARD By agriguru

- A jumping gene can move from one chromosomal position to another.
- A cistron encodes a specific polypeptide chain.
- Chekkurmanis is a drought-tolerant vegetable.
- M-9 is a dwarfing rootstock of apple.
- A nuclear family consists of a husband, wife, and children.
- A marginal farmer has less than 1 hectare of land.
- A seed is a fertilized ovule with an intact embryo, stored food, and seed coat.
- For a field soil sample weighing 60 g that lost 12 g on drying, the moisture percent on a dry weight basis is 25%.
- Averages or Arithmetic Mean is obtained by dividing the sum of all variables by their total number.
- Tithonia speciosa is a flowering plant with reddish-orange flowers.
- Guinea grass is suitable for intercropping in coconut plantations.

Important One-liner for IBPS AFO & NABARD By agriguru

- Farm forestry promotes commercial tree growing by farmers on their own land.
- Pineapple produces the highest tonnage per unit area.
- Squash is a fruit juice with 25% juice and 40% TSS.
- Candied fruit is impregnated with cane sugar or glucose syrup.
- Banana is propagated vegetatively.
- Litchi can be easily layered.
- Avocado is rich in fat (77%) and ripens only after harvest.
- Mango is rich in Vitamin A.
- Fungal diseases of mushrooms include soft mildew, brown plaster mold, green mold, and bubble disease.
- A tornado has a funnel-shaped cloud extending downwards.
- A lawn makes a garden appear larger.
- A sunken garden is set below the ground level.
- A good quality coconut seedling has a collar girth of 10-12 cm.

Important One-liner for IBPS AFO & NABARD By agriguru

- Climbers and Creepers grow over structures like walls and trellises.
- The National Food Security Mission (2007) is a guarantee program for people below the poverty line.
- C-DNA is synthesized from cellular mRNA.
- An Iso-Cost line shows combinations of inputs purchasable with a given amount of funds.
- Pasteurization involves heating food at 72°C for 15 seconds or 63°C for 30 minutes.
- High-density planting in apple can accommodate 500-1250 plants per hectare.
- MH (Maleic Hydrazide) induces dwarfism in plants.
- TIBA (Triiodobenzoic Acid) is used for flower induction.
- GA-3 (Gibberellic Acid) increases fruit size.

Important One-liner for IBPS AFO & NABARD By agriguru

- A Cybrid is a hybrid using the nucleus of one parent cell and cytoplasm of both cells.
- Arka Hans is a hybrid grape variety from Anab-e-Shahi X Bangalore Blue.
- An Isoquant shows combinations of inputs for a given output.
- Methyl Bromide is used to fumigate soil against nematodes and insects.
- Water Dispersible Powder is an insecticide formulation with a carrier.
- Low Percentage Base Saturation (PBS) indicates soil acidity.
- Triticale is a man-made cereal (wheat x rye).
- A Monopsony market has a single buyer and many sellers.
- Compost is rotted organic matter made from waste.
- Chasmogamy is self-pollination where flowers open only after pollination.
- Njavara is a medicinal rice variety.
- Jaya is a medium-duration rice variety.

Important One-liner for IBPS AFO & NABARD By agriguru

- A learning experience is a reaction from seeing.
- Preservation keeps food from spoilage after harvest.
- The Single Seed Descent method does not allow selection until the F5 generation.
- The Pedigree method improves traits like height and disease resistance.
- Electroporation uses an electric field to increase cell permeability for introducing substances.
- Group-contact involves contacting 20 to 30 rural people or farmers in a group.
- Recurrent selection selects desirable genes in each generation.
- Pure line selection is used for breeding wheat.
- The Backcross method improves good varieties.
- Pure line selection is not for cross-pollinated crops.
- Injection of hormones is not generally practiced.

Important One-liner for IBPS AFO & NABARD By agriguru

- Crop Logging assesses nutrient needs in sugarcane.
- The Bulk method is not for handling segregating populations.
- Softwood grafting is used for cashew propagation.
- Multi-seeded fruits include tomato, jackfruit, watermelon, and apple.
- Bayer (Monsanto) is a multinational seed company.
- VAT (Value Added Tax) is a multistage sales tax with credit for business purchases.
- A watershed is a natural hydrological unit with a common runoff outlet.
- Oil of petroleum acts as an insecticide and carrier.
- The greenhouse effect involves sunlight, carbon dioxide, and other gases warming the atmosphere.
- Glyphosate is a non-selective herbicide.
- Nutmeg is a nut with no cholesterol.
- Allamanda cathartica has yellow flowers.

Important One-liner for IBPS AFO & NABARD By agriguru

- A secondary parasite feeds on a primary parasite.
- Biodiesel is a partial substitute for petroleum diesel.
- Agriculture drought is a period of 4 consecutive weeks from May to mid-October or 6 weeks during other times.
- A minor pest causes 5% to 10% crop loss.
- A negligible pest causes less than 5% crop loss.
- A major pest causes more than 10% crop loss.
- Lycopene gives tomatoes their red color.
- Ethylene is a gaseous plant hormone.
- IBA (Indole-3-butyric acid) promotes rooting.
- Short day plants (e.g., tobacco, cotton) need less than 12 hours of daylight.
- Pineapple (CAM - Crassulacean Acid Metabolism) opens stomata at night to collect CO_2.
- Green manuring incorporates fresh green plant tissue into soil to improve fertility and structure.

Important One-liner for IBPS AFO & NABARD By agriguru

- Holcocera is a predatory insect larva on lac encrustation.
- Feldspar is a primary mineral with potassium.
- Diffusion is the movement of a substance from high to low concentration.
- Pollarding involves cutting branches to produce new shoots.
- Farm planning decides on the best combination of crops and livestock for the future.
- Farm Budgeting estimates costs, returns, and net profit of a farm.
- Somatic Embryogenesis forms somatic embryos from callus.
- Nipping removes apical buds of chickpea.
- Retting treats stalks for fiber extraction.
- Tomato Sauce/Ketchup is made from strained and cooked tomato pulp.
- A progeny of a single homozygous, self-pollinated crop is a pure line.
- National Rural Employment Guarantee Act (NAREGA, 2006) provides at least 100 days of wage employment in rural areas.

Important One-liner for IBPS AFO & NABARD By agriguru

- Wind breaks are protective plantations against strong winds.
- Ringing/Girdling is a pruning method where a circular ring of bark is removed.
- A leaflet is a small paper with brief information on a subject.
- Platymerus is a reduvid predator of the rhinoceros beetle.
- Crop rotation is cultivating an ordered succession of crops or fallow in the same land.
- Case worm is a rice pest controlled by draining water.
- Mahamaya is a rice variety known for its tolerance to Brown Plant Hopper (BPH).
- Farm Management involves decision-making in agriculture, focusing on the optimal use of resources to maximize productivity and profitability.
- A seed typically consists of embryo, endosperm, and seed coat.
- Sindhu is indeed a seedless variety of mango.

Important One-liner for IBPS AFO & NABARD By agriguru

- Ganesh is a variety of pomegranate known for its seedless quality.
- A gene is a segment of DNA that codes for specific characteristics or traits.
- Plastids are organelles in plant cells that contain their own DNA and are involved in photosynthesis and storage of nutrients.
- Jelly is a semi-solid, transparent product made from fruit juice and pectin.
- Flash cards are educational tools used to aid learning through visual cues and sequential information.
- Water leaf is a leafy vegetable that thrives in shady conditions.
- A poster is a large printed sheet used to convey information or attract attention to a particular topic.
- A double top cross involves crossing two single-cross hybrids.
- A chromosome is a DNA molecule combined with proteins, forming a compact structure within a cell.

Important One-liner for IBPS AFO & NABARD By agriguru

- Pleiotropy occurs when a single gene influences multiple phenotypic traits.
- Treatment of message refers to the way information is conveyed to ensure it is understood effectively by the audience.
- AgI (silver iodide) and dry ice are substances used in cloud seeding for artificial rain stimulation.
- Conservation tillage or stubble mulch tillage preserves organic residues on the soil surface to prevent erosion and conserve moisture.
- An exhibition is a display of various materials for educational or promotional purposes.
- Method demonstration is a practical presentation showing how to perform a specific task or technique.
