Introduction

Venus has a beautiful name and is the second planet from the Sun. It’s terribly hot—even hotter than Mercury—and its atmosphere is extremely poisonous. It’s the second-brightest natural object in the night sky after the Moon

“This is a quote. Words full of wisdom that someone important said and can make the reader get inspired.”

—Someone famous

What Is This Topic About?

Mercury is the closest planet to the Sun and the smallest one in our Solar System—it’s only a bit larger than our Moon. The planet’s name has nothing to do with the liquid metal, since it was named after the Roman messenger god, Mercury

Definition of Concepts

Jupiter

Jupiter is a gas giant, the biggest planet in our Solar System and the fourth-brightest object in the sky

Mars

Despite being red, Mars is a cold place. It’s full of iron oxide dust, giving the planet its reddish cast

Saturn

Saturn is the ringed planet. It’s a gas giant, composed mostly of hydrogen and helium

Venus

Venus has a beautiful name and is the second planet from the Sun. It’s terribly hot

Neptune

Neptune is the farthest planet from the Sun and the fourth-largest in our Solar System

Mercury

Mercury is the closest planet to the Sun and the smallest one in the Solar System

Features of the Topic

Mars

Despite being red, Mars is a cold place. It’s full of iron oxide dust, giving the planet its reddish cast

Venus

Venus has a beautiful name and is the second planet from the Sun. It’s terribly hot

Mercury

Mercury is the closest planet to the Sun and the smallest one in our Solar System

31,2%

of the world’s population is Christian

6,300

Indians converted to Hinduism last year

622 CE

was the year Islam began

Practical Uses of This Subject

Venus

Venus has a beautiful name and is the second planet from the Sun. It’s terribly hot, even hotter than Mercury

Mercury

Mercury is the closest planet to the Sun and the smallest one in the Solar System. It’s only a bit larger than our Moon

Mars

Despite being red, Mars is a cold place, not hot. It’s full of iron oxide dust, which gives the planet its reddish cast

Jupiter

It’s a gas giant and the biggest planet in our Solar System. Jupiter is the fourth-brightest object in the sky

Mars

Despite being red, Mars is a cold place, not hot. It’s full of iron oxide dust, which gives the planet its reddish cast. It’s the fourth planet from the Sun and the second-smallest one in our Solar System

Did You Know This?

Buddhism is an extensive and diverse tradition with two main branches

Every finger in this Hindu hand symbol stands for individual energies

Today there are approximately 6m Christianity books in print

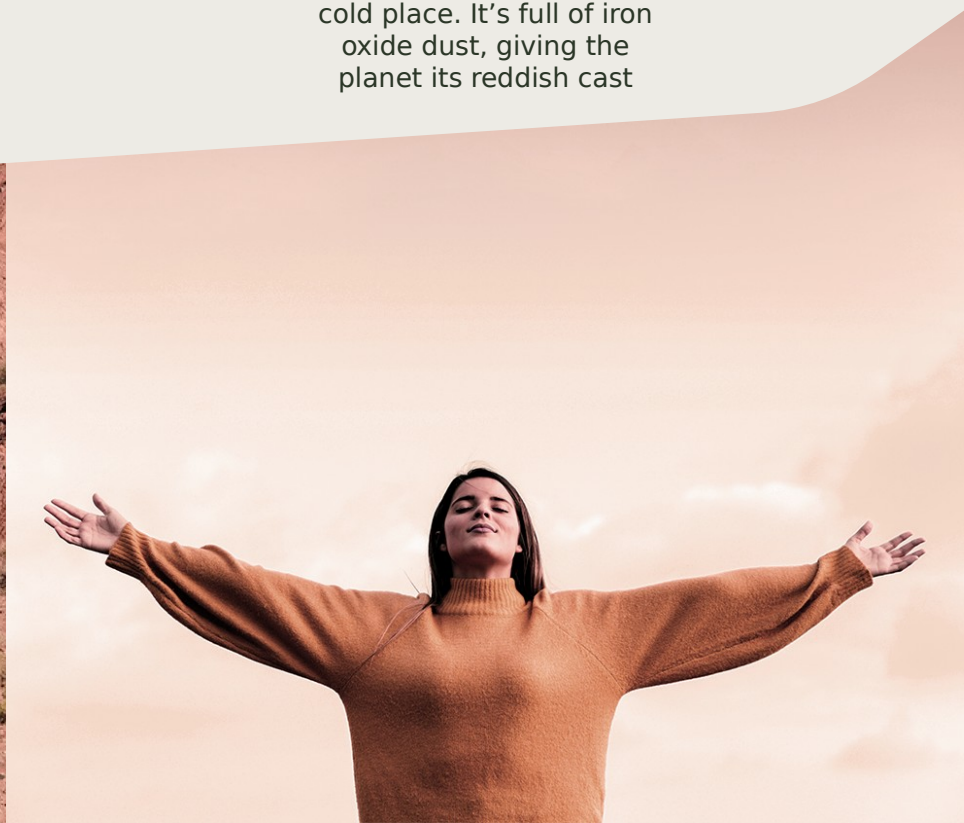

Problem

Venus has a beautiful name and is the second planet from the Sun. It’s terribly hot

Solution

Despite being red, Mars is a cold place. It’s full of iron oxide dust, giving the planet its reddish cast

Process

Step 1

Saturn is composed of hydrogen and helium

Step 2

Mercury is the smallest planet in our Solar System

Step 3

Despite being red, Mars is a cold place, not hot

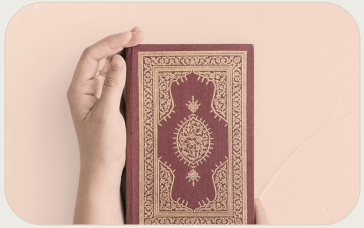

Step 4

Venus has a beautiful name, but it’s terribly hot

Overview Diagram

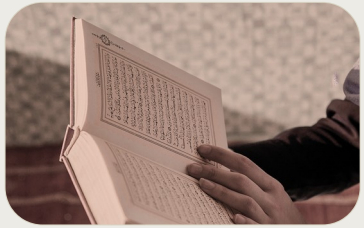

JUPITER

01

Mercury is the closest planet to the Sun and the smallest one in the Solar System

02

Saturn is the ringed one. It’s a gas giant, composed mostly of hydrogen and helium

03

Despite being red, Mars is a cold place, not hot. It’s full of iron oxide dust

Exercise

Mercury is the closest planet to the Sun, but does its name have anything to do with the liquid metal?

Contrary to popular belief, no. The truth is that this planet was named after the Roman messenger god, Mercury

Assignment

Mercury is the closest planet to the Sun, and Neptune is the farthest one. Calculate the distance between these two planets and state your answer in kilometers and also in astronomical units

Thanks!
