1. Buka laman website <https://www.puzzle-maker.com/> Pilih puzzle yang akan dibuat, misalnya **Word Search**

2. Ketik Judul dan Sub Judul. Tuliskan satu kata (atau frasa yang sangat singkat) per baris, setiap kata dengan karakter garis miring (/) beserta Clue (petunjuk) dari kata tersebut lalu **Enter**. Hindari Jawaban yang Sangat Panjang. Jawaban terpanjang akan menentukan ukuran puzzle.

Misalnya, jika Anda memiliki 10 kata kecil dan satu kata 20 huruf, puzzle Anda akan memiliki setidaknya 20 baris dan 20 kolom huruf. Contoh kata singkat: **Rabbit / It likes carrot**

Instructions:
List one word (or very short phrase) per line. The longest of these entries will affect the size of the puzzle. This produces a normal puzzle in which the words to be found are listed below the grid of letters.

Optional:
You can make the puzzle more interesting by listing clues instead of the words themselves. To do this, follow each word with a slash "/" character and a clue. Press the Enter key after each word/clue pair. The next screen will let you add a word bank if you want to make the puzzle easier.

Normal Example:
Delaware / The first state.
Rhode Island / The only state with two unique words in its name.
