HEDGEFUND Indicator

Our Indicator „HEDGEFUND“
is the best indicators we ever created.

Use your chance to be part of the
winning team and boost your trading
results.

The indicator analyses the chart over a
specified time and find the keylevel in
which institutional traders work.
This will give you an edge over the market.

The indicator can be used on every forex pair,
commodities and stocks. Also, it can be used
on every time frame, so depending on your style,
you can use it for scalping, swing-trading or long
term investing. This completely up to you.
The strategy remains always the same.

In this Handbook we cover when to
enter a trade, where to set your Stop Loss
and when to take Profit. This strategy in
combination with our indicator is simple and
that a lot of our members turned from loosing
money into profits making traders in less than
two months.

When to enter a trade ?

The indicator gives you several lines and zones. For entering a trade we use the „**BUY**“ and „**SELL**“ Zones. Also the „Sell Now“ and „Buy Now“ Lines.

We wait for the price to approach these zones and we only when we got confirmation from a closed candle. Patience is a key element of success in trading. Don't force trades. Let them come to you. Always respect your Stop Loss. And always trade with Stop Loss. Also keep your money management right. We don't risk than 3% of capital account on a single trade. Depending on your Timeframe set your trade break even after some pips. This gives you a risk-free trade.

Rules for **BUY Trade:**

ENTER: We open a Buy position, when the price breakout of the the „**BUY**“ Zone. Only trade on closed candles!

STOPLOSS: We Place the **STOP LOSS** under the redzone. This gives us a really good Risk:Reward Ratio, in most cases from more than 2:1.

TAKE PROFIT: The indicator gives you 4 potential targets. In 80% of the time, the first target is reached.

Rules for **SELL Trade**:

ENTER: We open a Buy position, when the price breaks out of the „**SELL**“ Zone. Only trade on **closed** candles!

STOPLOSS: We Place the **STOP LOSS over the greenzone**. This gives us a really good Risk:Reward Ratio, in most cases from more than 2:1.

TAKE PROFIT: The indicator gives you 4 potential targets. In 80% of the time, the first target is reached.

Always remember the following rules:

- **Don't be greedy**
- **Always respect your Stop Loss**
- **Don't Force trade, there is always another trade.**
- **Always use right Lot Size according to your risk management**
- **Don't overtrade**
- **Set your trades to break even to get risk-free trades**
- **You will always have some losing trades. It is part of the game.**
