
Here is where
your
presentation
begins

Whoa!

It could be the part of the presentation where you can introduce yourself, write your email...

“This is a quote. Words full of wisdom that someone important said and can make the reader get inspired.”

—Someone famous

Agenda

1

Introduction

Here you could describe the topic of the section

2

Presentation

Here you could describe the topic of the section

3

Conclusion

Here you could describe the topic of the section

This is a great headline

And this is the subtitle that makes it comprehensible

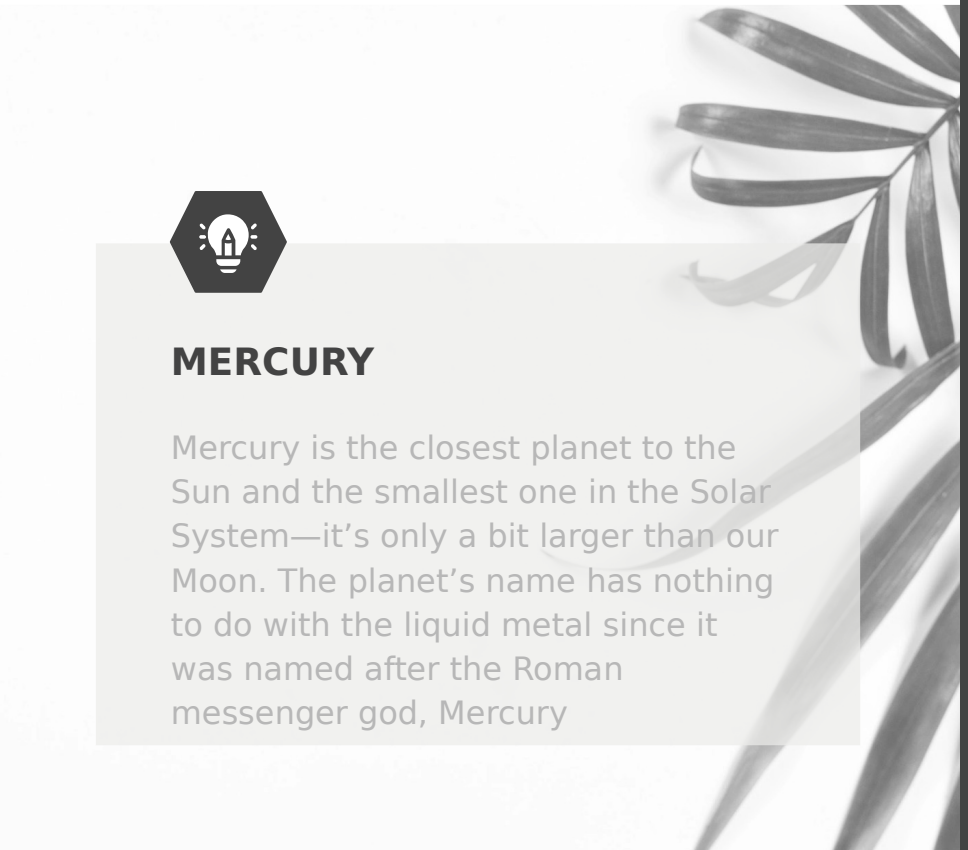

The **slide title** goes here!

Do you know what helps you make your point clear? Lists like this one:

- Because they’re simple
- You can organize your ideas clearly
- And because you’ll never forget to buy milk!

And the most important thing: the audience won’t miss the point of your presentation

Maybe you need to divide the content

MERCURY

Mercury is the closest planet to the Sun and the smallest one in the Solar System—it’s only a bit larger than our Moon. The planet’s name has nothing to do with the liquid metal since it was named after the Roman messenger god, Mercury

VENUS

Venus has a beautiful name and is the second planet from the Sun. It’s terribly hot—even hotter than Mercury—and its atmosphere is extremely poisonous. It’s the second-brightest natural object in the night sky after the Moon

You could use three columns, why not?

MARS

Despite being red, Mars is a cold place, not hot. It’s full of iron oxide dust, which gives the planet its reddish cast

JUPITER

It’s a gas giant and the biggest planet in our Solar System. Jupiter is the fourth-brightest object in the sky

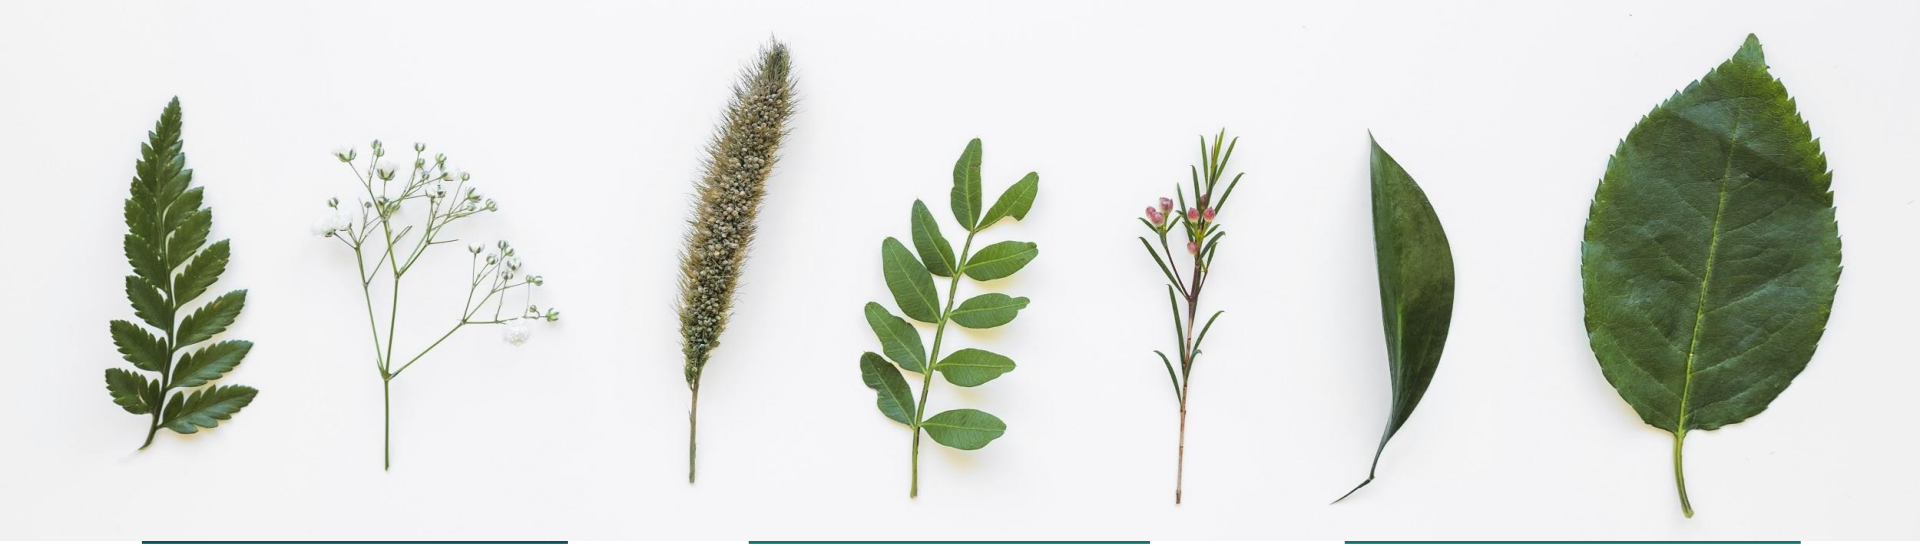

MERCURY

Mercury is the closest planet to the Sun and the smallest one in our Solar System—it’s only a bit larger than our Moon

MARS

Despite being red, Mars is a cold place, not hot. It’s full of iron oxide dust, which gives the planet its reddish cast

MERCURY

Mercury is the closest planet to the Sun and the smallest one in our Solar System—it’s only a bit larger than our Moon

VENUS

Venus has a beautiful name and is the second planet from the Sun. It’s terribly hot—even hotter than Mercury

A picture always reinforces the concept

Images reveal large amounts of data quickly, so remember: use an image instead of long texts. Your audience will appreciate that

A picture is
worth a
thousand
words

Awesome words

Because key words are great for catching your audience’s attention

Section 2

Use illustrations to
introduce a new section

Reinforce the concept using infographics!

NEPTUNE

Neptune is the farthest planet from the Sun

SATURN

It’s a gas giant, composed mostly of hydrogen and helium

MARS

Despite being red, Mars is a cold place, not hot. The planet is full of iron oxide dust

MERCURY

Mercury is the closest planet to the Sun and is only a bit larger than our Moon

Infographics make your idea understandable...

MERCURY
Mercury is the closest planet to the Sun and is only a bit larger than our Moon

SATURN
Yes, this is the ringed one. It’s a gas giant, composed mostly of hydrogen and helium

VENUS
Venus has a beautiful name, but it’s terribly hot, even hotter than Mercury

MARS
Despite being red, Mars is a cold place, not hot. It’s full of iron oxide dust

NEPTUNE
Neptune is the fourth-largest planet in our Solar System and the farthest from the Sun

JUPITER
It’s a gas giant and the biggest planet in our Solar System

… and the same goes for tables

	MASS (earths)	DIAMETER (earths)	SURFACE GRAVITY (earths)
MERCURY	0,06	0,38	0,38
MARS	0,11	0,53	0,38
SATURN	95,2	9,4	1,16

JUPITER

It’s a gas giant and the biggest planet in our Solar System

MERCURY

Mercury is the closest planet to the Sun and is only a bit larger than our Moon

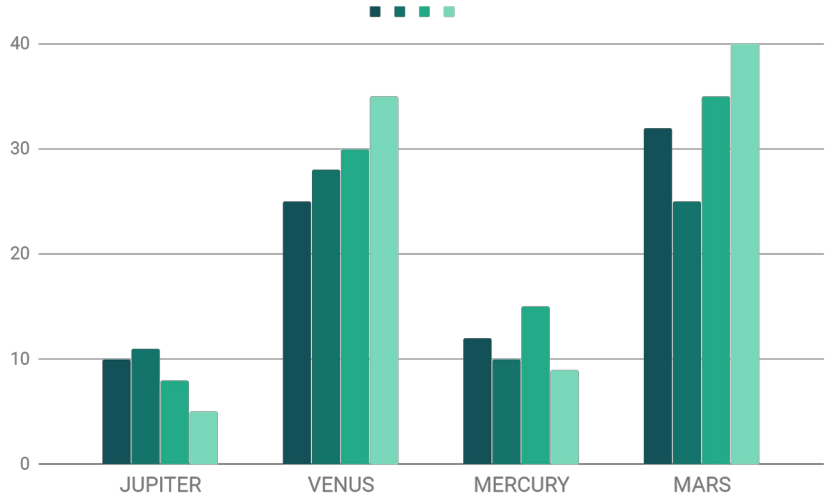

MARS

Despite being red, Mars is a cold place, not hot. The planet is full of iron oxide dust

VENUS

Venus has a beautiful name, but it’s terribly hot, even hotter than Mercury

If you want to modify this graph, click on it, follow the link, change the data and replace it here

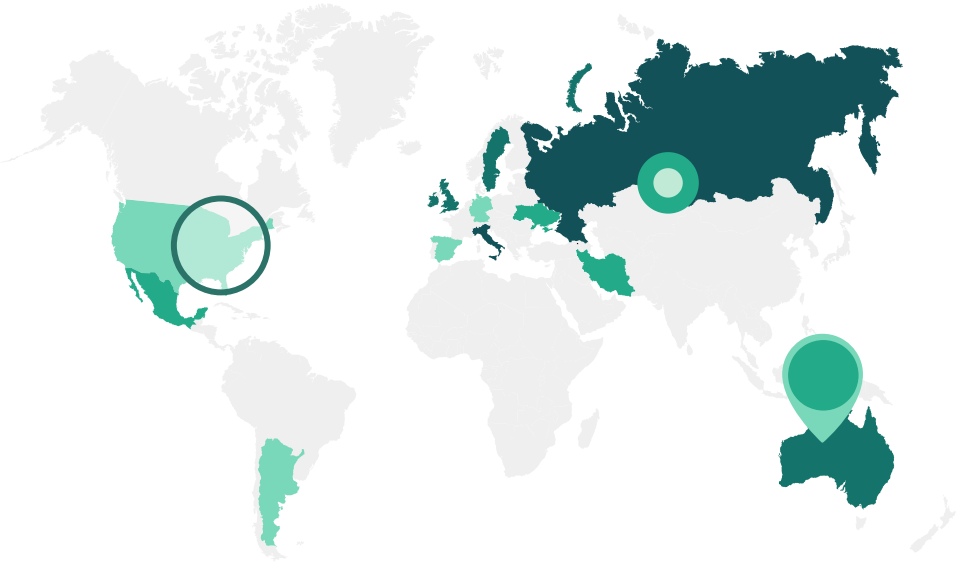

This is a map

JUPITER
It’s a gas giant and the biggest planet in our Solar System

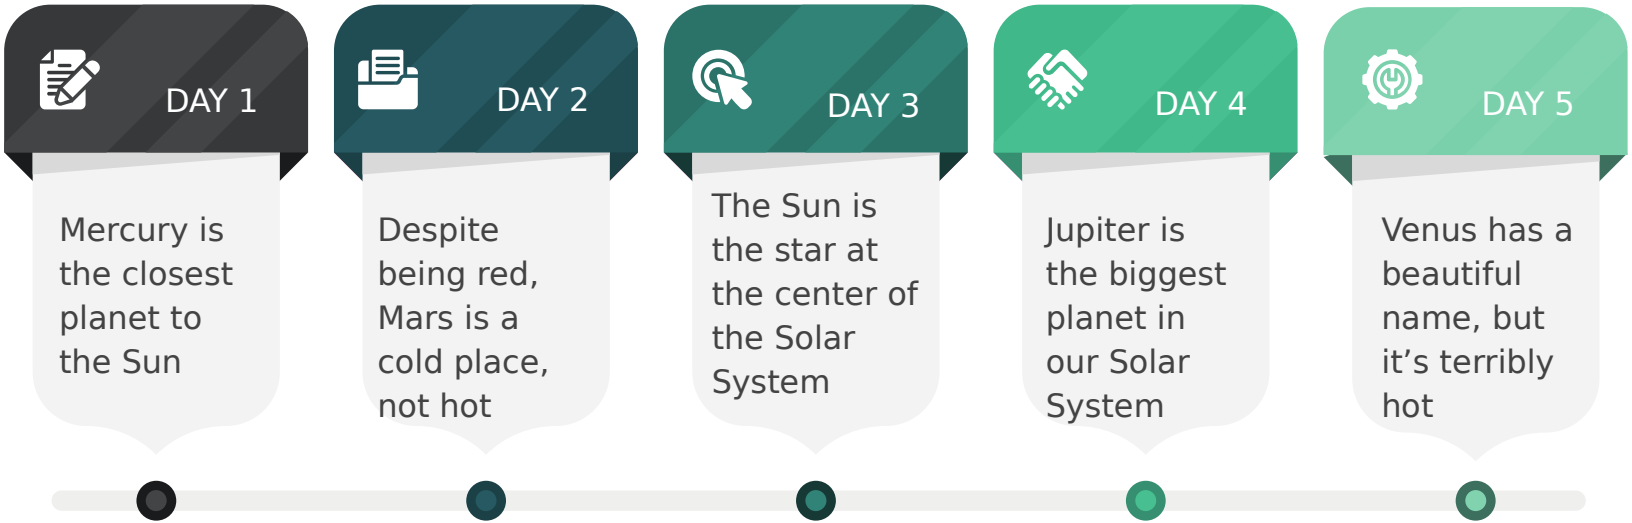

VENUS
Venus has a beautiful name, but it’s terribly hot, even hotter than Mercury

MERCURY
Mercury is the smallest planet in our Solar System

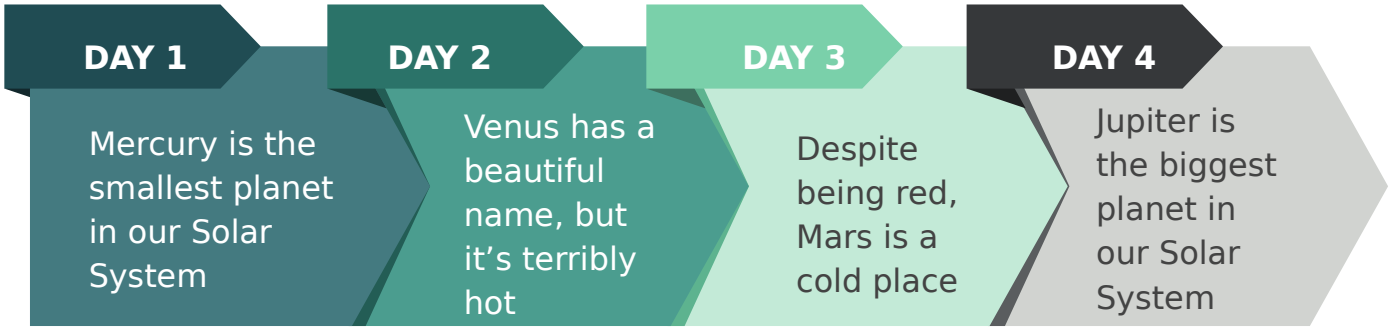

MARS
Despite being red, Mars is a cold place, not hot

A timeline always works fine

Do you prefer this timeline?

How about the percentages?

25%

VENUS

It’s terribly hot, even hotter than Mercury

50%

MARS

Despite being red, Mars is a cold place, not hot

75%

JUPITER

It’s the biggest planet in our Solar System

4,498,300,000

Big numbers catch your audience’s attention

333,000.00

earths is the Sun’s mass

24h 37m 23s

is Jupiter’s rotation period

386,000 km

is the distance between the Earth and the Moon

Sometimes, reviewing concepts is a good idea

MARS

Despite being red, Mars is a cold place. The iron oxide dust gives the planet its reddish cast

MERCUR Y

Mercury is the closest planet to the Sun and is only a bit larger than our Moon

VENUS

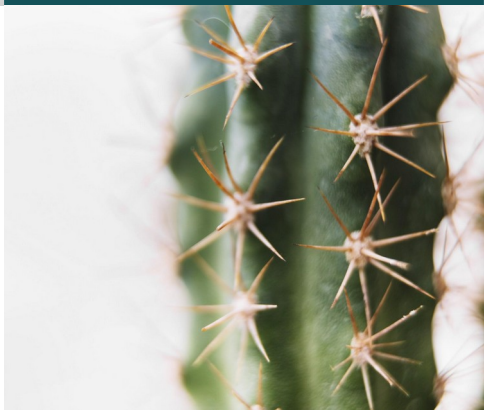

Venus has a beautiful name, but it’s terribly hot, even hotter than Mercury

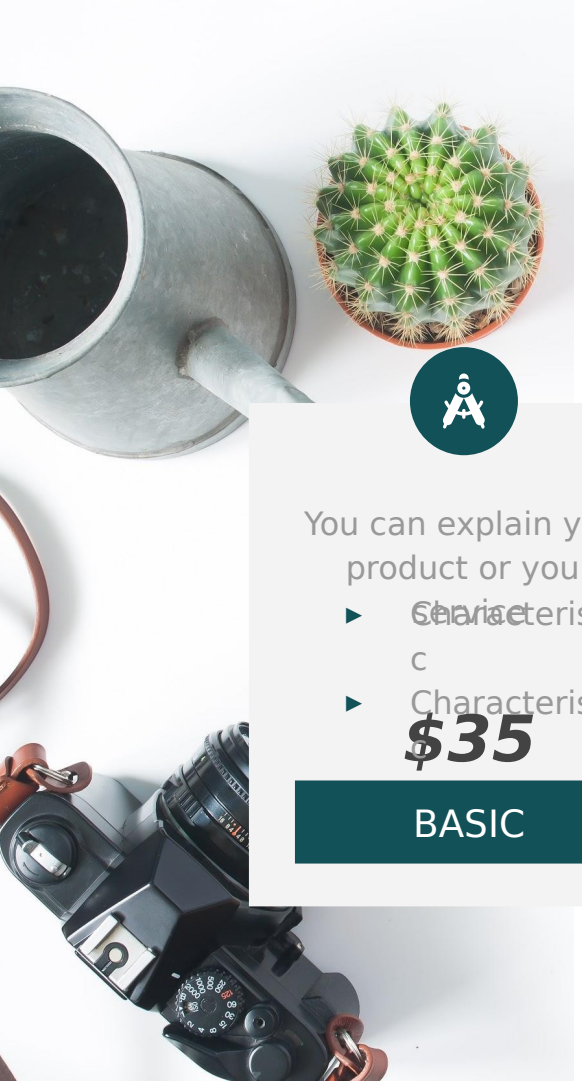

SATURN

Yes, this is the ringed one. It’s a gas giant, composed mostly of hydrogen and helium

JUPITER

Jupiter is a gas giant and the biggest planet in our Solar System
