Whoa!

This can be the part of the presentation where you introduce yourself, write your email...

01

Name of the section

Do you need longer text?

Mercury is the closest planet to the Sun and the smallest one in the entire Solar System. This planet's name has nothing to do with the liquid metal, since Mercury was named after the Roman messenger god. Despite being closer to the Sun than Venus, its temperatures aren't as terribly hot as that planet's. Its surface is quite similar to that of Earth's Moon, which means there are a lot of craters and plains

Speaking of craters, many of them were named after artists or authors who made significant contributions to their respective fields. Mercury takes a little more than 58 days to complete its rotation, so try to imagine how long days must be there! Since the temperatures are so extreme, albeit not as extreme as in Venus, and the solar radiation is so high, Mercury has been deemed to be non-habitable for humans

The slide title goes here!

Do you know what helps you make your point crystal clear? Lists like this one:

- They’re simple
- You can organize your ideas clearly
- You’ll never forget to buy milk!

And the most important thing: the audience won’t miss the point of your presentation

You can divide the content

Mercury

Mercury is the closest planet to the Sun and the smallest one in the Solar System—it’s only a bit larger than the Moon. The planet’s name has nothing to do with the liquid metal, since Mercury was named after the Roman messenger god

Venus

Venus has a beautiful name and is the second planet from the Sun. It’s terribly hot—even hotter than Mercury—and its atmosphere is extremely poisonous. It’s the second-brightest natural object in the night sky after the Moon

Here are three important ideas

Jupiter

Jupiter is a gas giant and the biggest planet in the Solar System. It's the fourth-brightest object in the night sky and it was named after the Roman god of the skies

Venus

Venus has a beautiful name and is the second planet from the Sun. It’s terribly hot and its atmosphere is poisonous. It’s the second-brightest natural object in the night sky

Saturn

Saturn is a gas giant and has several rings and it's composed mostly of hydrogen and helium. Saturn was also named after the Roman god of wealth and agriculture

Divide the content in four ideas

Mars

Despite being red, Mars is actually a cold place. It's full of iron oxide dust, which gives the planet its reddish cast. It’s made of basalt

Venus

Venus has a beautiful name and is the second planet from the Sun. It’s terribly hot, even hotter than Mercury. It has a toxic atmosphere

Jupiter

Jupiter is a gas giant and the biggest planet in the Solar System. It's the fourth-brightest object in the night sky and named after a Roman god

Saturn

Saturn is a gas giant and has several rings. It's composed mostly of hydrogen and helium. It has was named after a Roman god

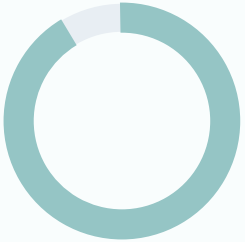

Medical investigation

75%

Cognitive

Mercury is the closest planet to the Sun

90%

Motor

Saturn is a gas giant and has several rings

Jupiter & Earth

- Jupiter was named after a Roman god
- Jupiter is the biggest planet of them all
- Earth is known as the Blue Planet
- Earth is the third planet from the Sun

	Symptoms	Treatments
Mercury	XX	XX
Mars	XX	XX
Saturn	XX	XX
Venus	XX	XX

Reviewing concepts is a good idea

Mars

Despite being red, Mars is actually a cold place. It's full of iron oxide dust, which gives the planet its reddish cast

Venus

Venus has a beautiful name and is the second planet from the Sun. It’s terribly hot, even hotter than Mercury

Neptune

Neptune is the farthest planet from the Sun. It's also the fourth-largest planet by diameter in the Solar System

Earth

Earth is the third planet from the Sun and the only one that harbors life in the Solar System. This is where we all live

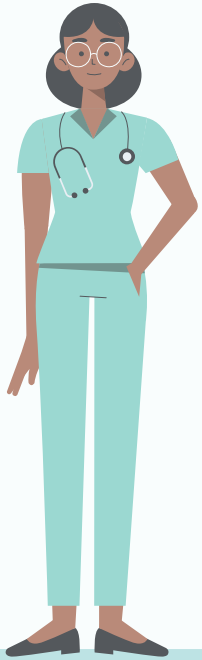

Saturn

Saturn is a gas giant and has several rings. It's composed mostly of hydrogen and helium. It was named after a god

Jupiter

Jupiter is a gas giant and the biggest planet in the Solar System. It's the fourth-brightest object in the night sky

A timeline always works well

Earth

Earth is the third planet from the Sun

01

Moon

The Moon is Earth’s only natural satellite

02

Mercury

Mercury is the smallest planet of them all

03

Saturn

Saturn was named after a Roman god

04

05

Ceres

It’s located in the main asteroid belt

06

Jupiter

Jupiter was named after a Roman god

07

Mars

Despite being red, Mars is a cold place

08

Neptune

Neptune is very far away from us

Infographics are useful

Goals

Mars

Despite being red, Mars is a cold place, not hot

Jupiter

Jupiter is the biggest planet of them all

Saturn

Saturn is a gas giant and has several rings

Mars

Despite being red, Mars is a cold place

Venus

It has a beautiful name, but it’s terribly hot

Neptune

It’s the farthest planet from the Sun

Medical discussion

01

Neptune

Neptune is very far away from us

02

Mars

Despite being red, Mars is a cold place

03

Jupiter

Jupiter was named after a Roman god

Discussion 1	
	Ceres is in an asteroid belt
	Earth harbors life

Discussion 2	
	Jupiter is a gas giant
	Saturn has rings

Use tables to represent data

	Team A	Team B	Team C	Team D	Team E	Team F
