Two ideas

Mercury

Mercury is the closest planet to the Sun and the smallest one in the Solar System—it’s only a bit larger than the Moon. This planet’s name has nothing to do with the liquid metal, since Mercury was named after the Roman messenger god

Venus

Venus has a beautiful name and is the second planet from the Sun. It’s terribly hot—even hotter than Mercury—and its atmosphere is extremely poisonous. It’s the second-brightest natural object in the night sky after the Moon

Three ideas

Jupiter

Jupiter is a gas giant and the biggest planet in the Solar System. It's the fourth-brightest object in the night sky and was named after the Roman god of the skies

Saturn

Saturn is a gas giant and has several rings. This planet is composed mostly of hydrogen and helium. It’s the sixth planet from the Sun and was named after a Roman god

Four ideas

Mars

Despite being red, Mars is actually a cold place. It's full of iron oxide dust, which gives the planet its reddish cast, and it’s made of basalt
