INTRODUCTION

Venus has a beautiful name and is the second planet from the Sun. It's terribly hot—even hotter than Mercury—and its atmosphere is very poisonous. It's the second-brightest natural object in the night sky after the Moon

OVERVIEW DIAGRAM

EXERCISE

Mercury is the closest planet to the Sun, but does its name have anything to do with the liquid metal?

Contrary to popular belief, it doesn't. The truth is that this planet was named after the Roman messenger god
