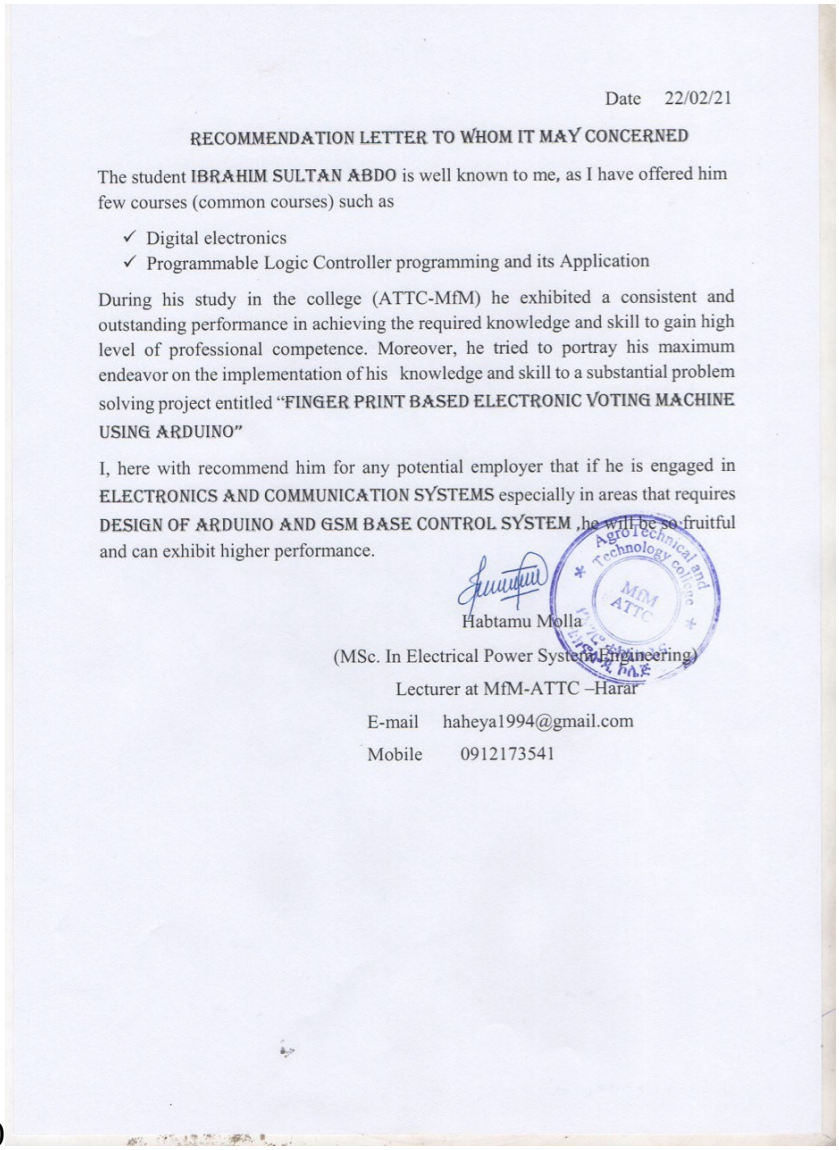
TO
DEAR EVANGADI
I'm Ibrahim Sultan Abdo from Ethiopia particularly from Adama city.
I have been following Evangadi on Facebook since when I was in campus.
Actually, I graduated from college two years ago by electronics and communication.
However, it was all my interest to learn software engineering but unfortunately, I couldn't because the college gives only certain courses.
It doesn't include software engineering even.
I'm really interested in programming since when I was in high school.
but I didn't get chance to learn or to attend it.
I even don't have PC until I graduated.
I have great ambition to become professional programmer.
I remember watching your videos about three years ago I was very touched,
When I watched it but because the situation here I couldn't follow.
I still look forward to achieving my wish.
I watch your video on YouTube and I'm very proud of you being an Ethiopian.
I love the way you approach when you explain and the attitude you have for technology and digital world that's the main thing that motivate me to learn this course as I stated above, I was following you, but I couldn't afford PC and Wi-Fi or stable network access.
I grew here in Adama, but my parents are from rural still living there I work help myself and my family little bit.
as everyone know the income you get here maybe from hand to mouth or even down.
Still, I didn't employ I have no permanent job but I'm able to get PC by just temporary work and by teaching Arabic and rarely by teaching home to home the elementary and high school student,
I was top student in high school but in preparatory I wasn't much top student because of personal issues but I scored medium grade in entrance national exam that took me to Haramaya university, but I couldn't join because of the protest there at that time I competed for another college passed the exam then joined the college by scholar (MFM ATTC COLLEGE HARAR) that's where I graduated from by electronics and communication.
Currently I live in Adama just rent a room for this purpose and I’m ready to face the challenge and to achieve my goal if I win your scholarship

I can attach all my educational documents here including my personal photos
My telephone number is 0938770000



Date 22/02/21

RECOMMENDATION LETTER TO WHOM IT MAY CONCERNED

The student IBRAHIM SULTAN ABDO is well known to me, as I have offered him few courses (common courses) such as

- ✓ Digital electronics
- ✓ Programmable Logic Controller programming and its Application

During his study in the college (ATTC-MfM) he exhibited a consistent and outstanding performance in achieving the required knowledge and skill to gain high level of professional competence. Moreover, he tried to portray his maximum endeavor on the implementation of his knowledge and skill to a substantial problem solving project entitled "FINGER PRINT BASED ELECTRONIC VOTING MACHINE USING ARDUINO"

I, here with recommend him for any potential employer that if he is engaged in ELECTRONICS AND COMMUNICATION SYSTEMS especially in areas that requires DESIGN OF ARDUINO AND GSM BASE CONTROL SYSTEM ,he will be so fruitful and can exhibit higher performance.

Habtamu Molla
(MSc. In Electrical Power System Engineering)
Lecturer at MfM-ATTC –Harar

AGRO TECHNICAL AND TECHNOLOGY COLLEGE

TEMPORARY CERTIFICATE OF GRADUATION

This is to certify that

Ibrahim Sultan Abdo

graduated from **Agro Technical and Technology College**

with **BSc Degree** in

Electrical and Electronics Technology

(Communication and Electronics)

(Cumulative GPA of 2.46)

On February 20, 2021 G.C.

This temporary certificate of graduation has been given pending the printing and issuance of the actual diploma.
