1.What are two distinctions of a Junos control plane? (Choose two.)

Selected Answer

- responsible for kernel processes
- implemented on the RE

2.What are two distinctions of a Junos data plane? (Choose two.)

Selected Answer

- implemented on the PFE
- screen options

3.What are two examples of exception traffic? (Choose two.)

Selected Answer

- encrypted packets
- OSPF updates

4.Which two items are true of J-Web? (Choose two.)

Selected Answer

- configuration commits are required
- real-time monitoring

5.What are two requirements of a functional zone? (Choose two.)

Selected Answer

- It must be named management.
- It cannot pass transit traffic.

6.Which statement is true about a Junos security device?

Selected Answer

- By default, a Junos security device does not allow traffic destined to itself.

7.Which zone is a system defined zone?

Selected Answer

- junos-host

8.Which security component would help identify application type of all allowed traffic traversing port 80?

Selected Answer

- application firewall

9.Security policy components require which three of the following? (Choose three.)

Selected Answer

- match criteria
- action
- a user-defined name

10.What is the default policy’s action for any traffic not matching a configured zone security policy or global policy?

Selected Answer

- silent discard

11.Which two statements are correct regarding Sky ATP file inspection profiles? (Choose two.)

Selected Answer

- They are used to determine the maximum size of files to scan.
- They are used to determine which file types to scan.

12.If you are using the free version of Sky ATP, which file type can you scan?

Selected Answer

- EXE files

13.What is the next step after creating a threat prevention policy?

Selected Answer

- Reference the threat prevention policy in a security policy.

14.When is the default action of an advanced anti-malware policy applied to a file?

Selected Answer

- When the verdict number of the file is less than the verdict threshold.

15.What does a Junos OS security device do to existing sessions upon commit, when a change is made to a NAT rule pool that is currently in use?

Selected Answer

- It waits for the existing session to timeout and then creates a new session for matched traffic.

16.You have enabled a NAT pool on an SRX Series device; however, you are not receiving any return traffic. What configuration item will solve this?

Selected Answer

- enabling proxy ARP

17.In the first layer of a two-layer matching condition for a NAT rule, what are three matching options for the traffic direction matching from a “from” clause? (Choose three.)

Selected Answer

- interface
- zone
- routing instance

18.Which operational command allows users to observe NAT translations?

Selected Answer

- show security flow session

19.What are two methods by which hashing functions provide data integrity in VPNs? (Choose two.)

Selected Answer

- original data cannot be determined from the hash value
- stronger hashes minimize collisions in hash comparisons

20.In the IKE Phase 1 configuration, what are the two choices for “Mode”? (Choose two.)

Selected Answer

- aggressive
- main

21.How do traffic selectors distinguish interesting transit traffic over a VPN tunnel?

Selected Answer

- by specifying accepted networks

22.When setting up a VPN to a remote gateway, what would selecting the “Optimized” check box do when selecting “Enable VPN monitor”?

Selected Answer

- consider transit traffic as the tunnel verification

23.When does a Junos security device perform UTM inspection?

Selected Answer

- both first path and fast path processing

24.Which list order does the antispam filter process e-mail for spam?

Selected Answer

- whitelist, blacklist, external spam block list server

25.What two whitelist types are supported for the SRX antivirus module? (Choose two.)

Selected Answer

- URL
- MIME

26.Which two methods are used to notify a user they've had content blocked an SRX Series device? (Choose two.)

Selected Answer

- embedded message in the protocol
- an e-mail message can be sent

27.Using the J-Web interface on an SRX Series device, what information is available when displaying the Monitor -> Routing -> Route Information?

Selected Answer

- inactive routes

28.Using J-Web on an SRX Series device, what are two required fields for the initial setup? (Choose two.)

Selected Answer

- Host Name
- Root Password

29.Which three Juniper devices are supported by Juniper Sky Enterprise? (Choose three.)

Selected Answer

- SRX Series
- NFX Series
- EX Series

30.Which three reports does Juniper Sky Enterprise offer in real-time on Junos EX Series devices? (Choose three.)

Selected Answer

- ARP tables
- PoE monitoring
- live packet capture

31.Which two hypervisors support vSRX Series devices? (Choose two.)

Selected Answer

- VMware ESX
- KVM

32.Click the Exhibit button. Users are restricted from accessing Facebook, however, a recent examination of the security logs show that users are accessing Facebook. Referring to the exhibit, what should you do to solve the problem?

Selected Answer

- Change the Internet-Access rule service to "junos-defaults".

33.What are two security policy components? (Choose two.)

Selected Answer

- application
- user-defined address object

34.A security administrator wants to deploy application control policies to allow or deny traffic based on dynamic applications in the organization's Amazon Web Services (AWS) deployment. Which action would accomplish this task?

Selected Answer

- Deploy a vSRX with the AppSecure suite in AWS and configure the AppFW.

35.Which two statements are true regarding unified security policies? (Choose two.)

Selected Answer

- A unified policy can be a zone-based policy.
- A unified policy can be a global-based policy.

36.Which statement is correct about interface-based NAT?

Selected Answer

- Interface-based NAT uses the outbound interface IP address to translate the source address of outgoing packets.

37.In the J-Web user interface, which feature is used to facilitate building IPsec VPN tunnels?

Selected Answer

- the VPN Wizard

38.You are configuring an SRX Series device to inter-operate with a third-party IPsec VPN endpoint that uses policies to create the VPN. In this scenario, what must be configured for the VPN to work?

Selected Answer

- proxy IDs

39.Which statement is correct about the antivirus feature on SRX Series devices?

Selected Answer

- The Sophos antivirus feature is less CPU intensive than the full file-based antivirus feature.

40.You are installing a Junos Space Log Collector VM for a large scale deployment. What are two valid node types for this deployment? (Choose two.)

Selected Answer

- Log Indexer node

- Log Receiver node
